- Wave-on Mounts™

SPRING CLIPS FOR FAST MOUNTING

Mounting TO-218s, TO-220s, and other tab-mount semiconductors has never been faster — or easier. Aavid spring clips (center photo) snap into place and apply pressure evenly, eliminating gaps between heat sink and semiconductor. Available with various extruded and stamped heat sinks, capable of cooling 1 to 4 plastic packages.

DOUBLE YOUR THERMAL PERFORMANCE WITH EPOXY-BONDED HEAT SINKS

Aavid's bonded-fin heat sinks double the cooling surface of extruded heat sinks (bottom photo). With epoxy-bonding, we get twice as many fins in the same volume, cutting thermal resistance to as low as 0.024° C/W for forced air, and 0.22° C/W for natural convection. 9 sizes for all standard power modules. Unlimited custom possibilities.

Backward Curved Motorized Impellers

Proven performers in a variety of electronic applications. Air discharge of 360° around the impeller permits innovative air moving designs and excellent performance even against higher pressures.

- Sizes: 5" to 28".
- CFM's: 75 to 10,800.
- Watts: 20 to 2650.
- AC or Brushless DC.

Backward curved motorized impellers should be considered when noise is an important design factor. Noise levels are generally lower and the sound spectrum is less annoying and less interruptive to the ear. These blowers are available in either AC or brushless DC models and feature ebm's Uni-struct™ construction which assures long-life, vibration-free performance.

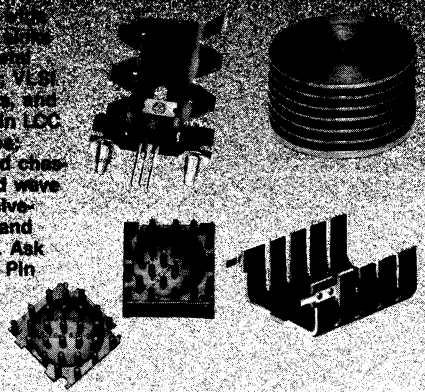
THERMAL MANAGEMENT FROM 1 TO 10,000 WATTS

FOR SEMICONDUCTORS, POWER TRANSISTORS, PC BOARDS, SYSTEM-LEVEL COOLING

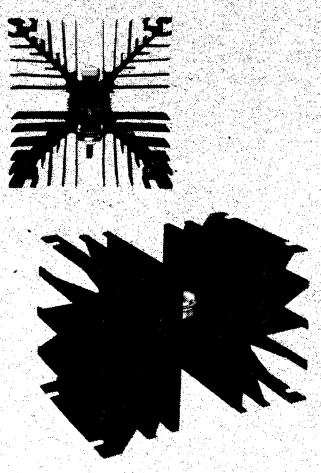
Standard Heat Sinks

Choose from our wide selection of heat sinks for plastic and metal power transistors, VLSI gate arrays, ASICs, and microprocessors in LCC and PGA packages; device, board, and chassis mounting; and wave solderable, adhesive-mount, snap-on, and press-on designs. Ask about our unique Pin Fin designs for LCC and PGA packages.



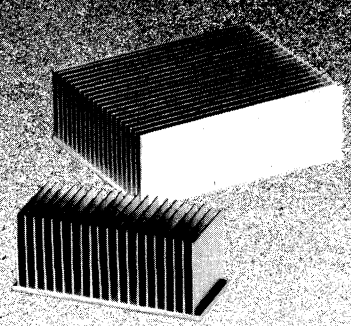
Extruded Heat Sinks and Extrusions

Choose from hundreds of existing shapes and sizes. Or, let us design that unique shape you need to optimize performance and cost. From design to finished heat sinks, and from small prototype quantities to large production quantities, our capabilities can meet all your requirements.



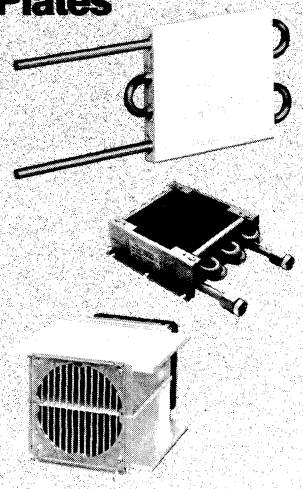
Heat Sinks

Choose from a variety of unique high fin density extrusions to provide maximum cooling efficiency per unit volume. These heat sinks give the same cooling performance as other heat sinks using nearly twice as much space. High fin density heat sinks provide maximum surface area and performance with relatively low weight.



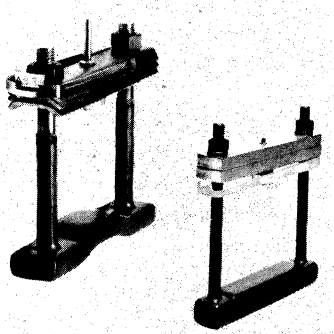
Heat Exchangers and Liquid Cooled Plates

Choose from a variety of liquid cooling and forced convection devices to provide safe temperature levels of densely packed semiconductors. We offer high pressure tube and fin type units (150 psi) made of copper tubes and fins mounted into an aluminum frame. Low pressure (15 psi) cellular type units provide excellent thermal performance while exhibiting very low pressure losses on both the air and water circuits. We offer custom design and manufacturing capability of compact high performance units to meet your requirements.



Mounting Clamps

Choose from clamps with compression ratings from 800 to 16,000 psi. These mounting clamps are for industry-standard compression rectifiers and SCR's. Unique force indicators provide direct reading of clamping force. All clamps are accurately centered giving uniform pressure. A variety of standard heat sinks are available for use with these mounting clamps.



Accessories

Choose from a wide selection of accessories to facilitate the installation and improve the thermal performance of both standard and custom heat sinks. We offer thermally conductive insulators, thermal joint compound, mounting hardware, Sync-Nut™ (insulated and non-insulated) wave-solderable locknuts, epoxy systems, and installation tools.

THERMOELECTRIC COOLERS

WHAT IS A THERMOELECTRIC COOLER?

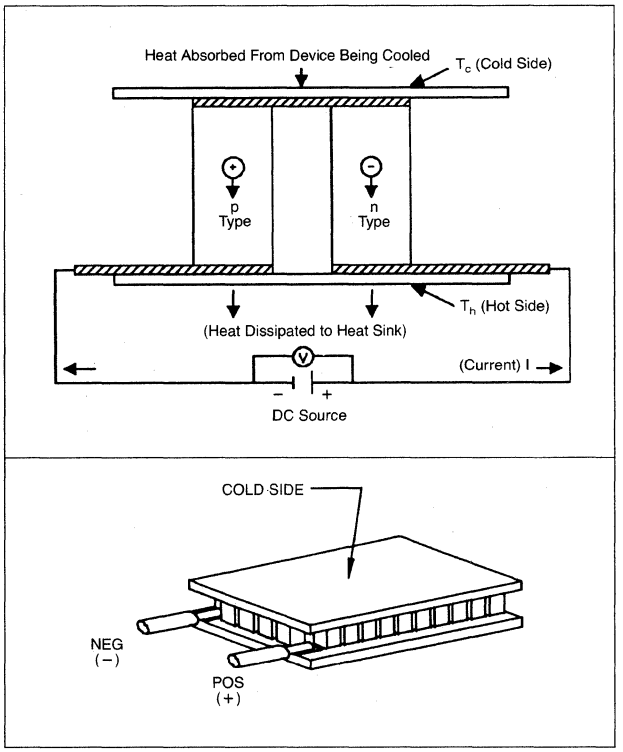
Thermoelectric coolers (TECs) are solid-state, vibration-free, noise-free heat pumps. They are modular devices and are simple to install and operate. Since they consist primarily of thermoelectric material sandwiched between ceramic plates with no moving parts, they are inherently reliable.

A single-stage thermoelectric cooler is composed of a matrix of thermoelectric couples, connected electrically in series and thermally in parallel. The thermoelectric couple consists of a p- and n-type semiconductor material.

A TEC can be fabricated with as few as one couple to as many as several hundred couples sandwiched between two ceramic plates. These plates form the top and base of the cooler and provide structural integrity as well as electrical insulation from, and thermal conduction to, the heat sink and the device being cooled.

HOW IT WORKS

Regulating the direction and amount of current—with the use of a feedback loop and temperature controller—allows TECs to cool, heat, or stabilize temperature. Reversing the direction of the current reverses the direction of heat pumping. The figure opposite illustrates the operation of a thermoelectric couple in the cooling mode.



TYPICAL APPLICATIONS

Thermoelectric coolers are ideally suited to a wide variety of applications due to their small size, wide operating temperature range, low power requirements, and high reliability. Applications can be found in military, aerospace, and commercial products, laboratory and scientific equipment, medical instruments, and test equipment.

Electro-optic cooling applications include stabilizing the temperature of solid-state lasers, and cooling infrared detectors and charge coupled devices (CCDs).

Volume cooling includes small volumes of air or liquid, and cold plates.

Miscellaneous Electronic Components such as high speed integrated circuits, parametric amplifiers, avalanche photo diodes, and vidicon tubes can be spot cooled using thermoelectric coolers.

HOW TO SPECIFY THERMOELECTRIC COOLERS

The standard coolers on the following page are a representative sample of our product line and are grouped according to the number of stages indicated by the first digit following the "M." They are listed in increasing order according to "Qmax"; the net heat load to completely suppress ΔT at the maximum applied power (Imax @ Vmax). For example, the MI3026T is a three-stage cooler which produces 109°C ΔT in a vacuum at 1.3 amps @ 3.4 volts. It will take .62 watts to completely suppress that ΔT to zero. This suppression is linear so that 10% of Qmax (0.072 watts) applied to the cold plate would suppress ΔT 10% thereby producing 98.1°C ΔT for that heat load condition.

Because of the non-linear behavior of TECs and the number of variables involved in analyzing them, they can be designed and modeled more accurately by our experienced engineers using Marlow Industries' proprietary computer software. For selection of coolers with more than two stages, or if more precision is required, please consult one of our application engineers.

HOW TO ORDER THERMOELECTRIC COOLERS

After you have chosen the thermoelectric cooler which meets your performance requirements, the complete part number should be specified, such as MI1022T-02AC. The two digits after the dash (-) specify metallized exterior which can be used to mount the cooler using solder or epoxy.

-01 means both sides are metallized
-02 means hot side only metallized
-03 means no metallization

The two letters refer to the ceramic material.

AC means aluminum oxide ceramic
BC means beryllium oxide ceramic

Most one- and two-stage coolers perform well with aluminum oxide (AC) ceramics. Beryllium oxide (BC) ceramics are used for coolers with three or more stages. BC ceramics can be used in one- and two-stage coolers at an additional cost.

Typical Fan Types and Uses

AC Axial Flow Fans (MU Series)

MU series fans use a shaded-pole motor. The fan has an aluminum diecast frame, the propeller is fabricated from UL-approved glass-filled polycarbonate resin, and the bearings are the largest possible ball bearings. These fans are thus light, robust, highly reliable and long-lasting. They are ideal for applications where forced cooling is necessary.

AC 115 volt versions: (also available in 230V)

DC Brushless Axial Flow Fans (MD Series)

The MD series fan uses a brushless DC motor to turn the fan blades. It is highly efficient and has low power consumption. They have high air-flow with low noise and vibration. These fans are unaffected by the primary power supply, whether it is 100VAC, 115VAC or 230VAC, so it can be used in equipment which is shipped anywhere in the world. The MD fans have exceptionally long life because they use the largest ball bearing possible for their size, have very low temperature rise, and have no brushes to wear out. They are ideal for a wide variety of applications where forced air cooling is necessary.

Propeller Fans (MR Series)

MR series fans are of special design employing the propeller principle. They are highly reliable and efficient, and produce minimal vibration, noise and leakage flux.
Each fan incorporates a device which emits an alarm signal in the event that the cooling performance drops, thus ensuring that the equipment being cooled does not overheat. Used extensively in high performance applications such as Mainframe computer cooling and clean benches (Laminar flow benches) where high pressure and air flow as well as long life are important.

PAPST/PAMOTOR AC FANS

Field proven, quality products you can rely upon for all of your cooling requirements.

PAPST/PAMOTOR offers a wide variety of fans for your selection. Each model combines the features of extended life with high airflow delivery at low noise levels.

Lightweight all-metal construction is typical of PAPST/PAMOTOR AC fans. This all-metal construction eliminates breakage and warping often found in conventional plastic fans. This all-metal feature also permits the entire fan to function as a natural heat sink, assuring cooler operation by effectively transferring heat from the rotor into the air stream via the impeller blades. Potential injurious heat is also transferred from the stator to the die-cast venturi by way of the metal struts. Life expectancy: (1) AC fans with sleeve bearings - 20,000 hours at maximum permissible ambient temperatures. (2) AC fans with ball bearings - 20,000 hours at 72° C or at the maximum permissible temperature if this is less than 72° C. Note: If the ambient temperature in which the fan operates is at 20° C below the above levels the life expectancy increases by 10,000 hours.

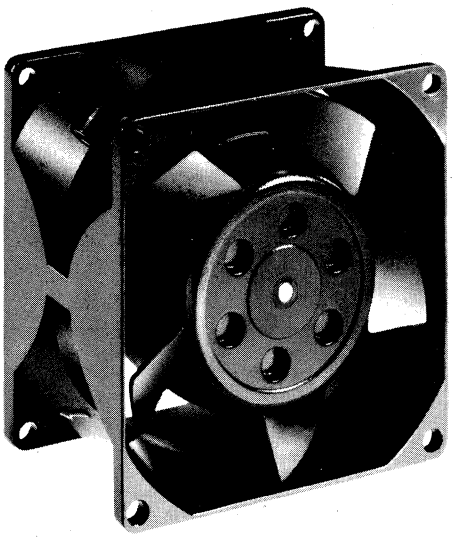
The PAPST/PAMOTOR exclusive bearing lubrication system incorporates hand-fitted broached sintered iron sleeve bearings on most fans, with precision high-temperature ball bearing versions also available. The dual sleeve bearings are separated by a large oil felt reservoir, which provides continuous fault free circulation of a special lubricant to the shaft and bearing surface.

An efficient, powerful inside-out motor, housed entirely within the impeller hub to conserve axial depth, has higher torque capabilities and a lower internal heat rise than the contemporary fixed shaft designs.

The impeller blades are computer designed and impulse welded to the precision hub and dynamically balanced to within .0001 inches in each end plane to minimize acoustical and mechanical vibrations.

PAPST/PAMOTOR also offers a super premium grade fan; (5 year warranty).

Perhaps the two most important fields of application for premium grade fans are: (1) in limited-production deluxe equipment, in professional-grade instrumentation, in few-of-a-kind, custom-designed and permanently-installed systems requiring optimum performance and absolute dependability for many years; and (2) as field replacements for retrofit units for original-equipment fans that have proven to be unreliable, are too noisy, or do not produce sufficient cooling airflow.



PAPST/PAMOTOR fans are Underwriters' Laboratories, Inc. recognized and have their Yellow Card Component Recognition Number E41168. Many are CSA certified and VDE approved.

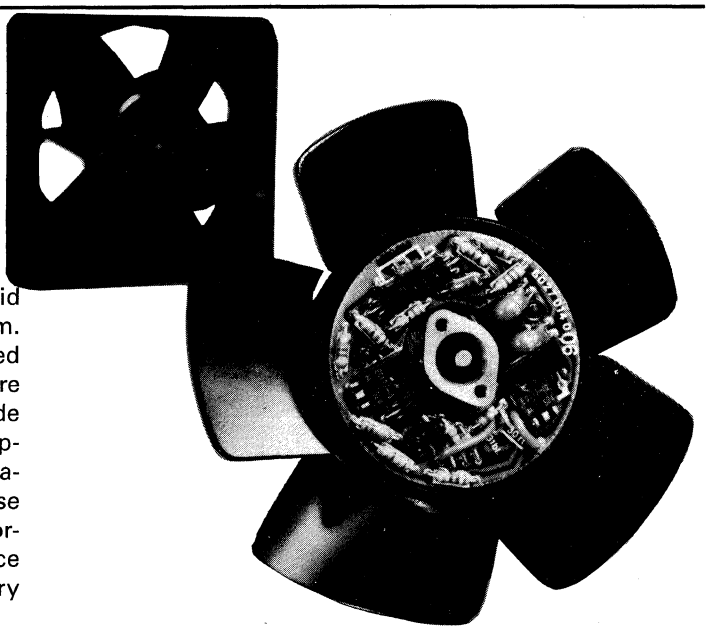
PAPST/PAMOTOR SOLID STATE BRUSHLESS DC FANS

THE ONLY COMPANY OFFERING YOU A FULL FAMILY OF SOLID STATE, BRUSHLESS DC FANS IN POPULAR FRAME SIZES & VOLTAGES, & AT POPULAR PRICES.



PAPST/PAMOTOR has a full line of self-contained, solid state, brushless DC fans for you to choose from. Through their design, these fans have been engineered to tackle those specialized applications which require highly reliable DC performance. Common uses include mobile radio equipment, medical electronics, shipboard computers, airborne applications, communications systems, automotive applications, marine use and telecommunications; wherever DC voltage is normally available. They are also finding wide acceptance for use in power stand-by modes to prevent memory loss in the event of AC power failure.

These fans are especially efficient and will outperform similar sized fans at normal operating back pressure. Typically, they offer greater air volume (cfm), reduced noise levels and reduced power drain. For example, the power drain at maximum back pressure is approximately 25% of that required in conventional AC units. These fans also achieve a new low in magnetic radiation and RF noise, thereby assuring the pure signals necessary for critical airborne or shipboard use.

These fans work well at all rated voltages, and are extremely quiet. They can be adjusted for performance and noise level by altering the voltage within the voltage range for your particular application. They feature a brushless motor with all electronics mounted on a PC card within the motor frame. Drive amplifiers for the motor are controlled by a patented Hall-effect generator circuit which is coupled by small pole pieces to the motor's field magnet (Patent No. 3-873-897). Available voltages include 5 VDC nominal, 12 VDC nominal, 24 VDC nominal and 48 VDC nominal.

The brushless DC motor is polarity protected* to avoid accidental damage and costly down time. If the input polarity is accidentally reversed, integral diodes block all circuits and the motor simply stops. Even in a locked rotor condition,* the motor goes into a neutral state to avoid damage. Precision bearings and lubricants help to achieve a life expectancy of 35,000 hours (sleeve bearing) and 60,000 hours (ball bearing) at maximum permissible ambient temperature. Note: If the ambient temperature in which the fan operates is at 20° C below the above levels the life expectancy increases by 10,000 hours.

*Except for 5 Volt models.

These fans do not require an external voltage inverter. This means that you save valuable mounting space and weight because the only consideration in mounting is the fan itself. This new concept has eliminated many of the inherent reliability and RF noise problems generally associated with using AC motors in a DC environment.

AIR CONDITIONERS

Temperature Control...

Solid State Cooling For Electronic Enclosures

Thermoelectric Air Conditioners are a solid state method of refrigeration, which eliminates the need for a compressor, refrigerant fluids or piping. The only moving parts are highly reliable fans used to dissipate output heat to the ambient air. These air conditioners can be applied in computers, machine tool controls, instrumentation & electronics for hostile environment protection. They offer design flexibility in a wide range of industrial and consumer applications where compactness and reliability are key.

Features:

- *No load cooling to −5°F (−20°C) at room temperature*
- *Lightweight, compact designs*
- *No compressor, no fluids, no coils*
- *Closed system protection from dust, chips, & moisture*
- *No moving parts except fans, means high reliability*
- *Low vibration, noise & maintenance*
- *Metal finishes resist corrosion*
- *Operates in any orientation - horizontal, vertical, etc.*
- *All models available from stock*

Other Products:

- Liquid cooled air conditioners rated to 1500 BTU/HR

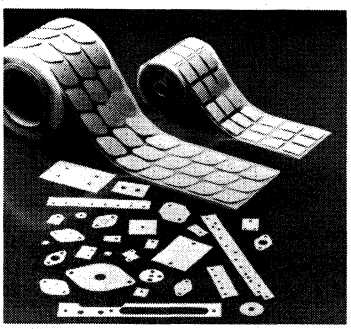
Sil-Pad® Thermally Conductive Insulators



WHAT ARE SIL-PAD INSULTORS?

Sil-Pad brand thermally conductive insulators are greaseless, silicone-based insulators typically mounted between a transistor and a heat sink. Sil-Pads offer low resistance to heat transfer while providing electrical isolation between the parts of an assembly.

Sil-Pads are constructed of soft silicone rubber compounded with compatible, thermally conductive fillers which provide thermal transfer capabilities. These compounds are combined with woven fiber or film substrates to provide a tough insulator able to withstand the mechanical rigors of assembly. Sil-Pads are thermally stable and compounded to eliminate flammability.

WHY USE SIL-PADS?

Bergquist is the leader in the development of thermally conductive insulating products. Sil-Pads eliminate the use of messy grease and brittle mica or ceramics in the assembly area. They save significant labor expense compared to grease and mica while providing excellent thermal resistance. Sil-Pads are also more dependable than brittle ceramics and mica which can crack or fracture. Another advantage of Sil-Pads is the variety of shapes they can be produced in, from standard punched parts to sheets or specially designed shapes. Regardless of your thermal or dielectric requirements there is a Sil-Pad to fit your application.

SIL-PAD 400®

Sil-Pad 400 is a composite of alumina oxide loaded silicone rubber and fiberglass. It is an ideal replacement for mica and grease. Sil-Pad 400 can range in thickness from .007 inches to .045 inches. The dielectric strength is 550 volts per mil. Thermal resistance for a TO-3 transistor is .5 °C/Watt for .009 inch material and .4 °C/Watt for .007 inch material.

SIL-PAD 1000®

Sil-Pad 1000 is made of boron nitride filled silicone rubber and fiberglass. It is ideal for applications requiring higher levels of heat transfer than Sil-Pad 400. It has lower thermal resistance and is used in applications where surface irregularities require a thicker pad with higher levels of heat transfer. Thickness of Sil-Pad 1000 is .009 inches. The dielectric strength is 550 volts per mil. Thermal resistance for a TO-3 style transistor is .3 °C/Watt.

SIL-PAD 2000®

Sil-Pad 2000 is Bergquist's high performance, high reliability thermally conductive insulator. Sil-Pad 2000 is designed for demanding military/aerospace and commercial applications and complies with Mil-I-49456, type 1, class 1, the specification governing fiberglass reinforced elastomeric sheet insulation material. With a thickness of .015", Sil-Pad 2000 has a breakdown voltage of 4000 volts and thermal resistance of 0.2 °C/Watt. Sil-Pad 2000 is also available in a variety of thicknesses.

SIL-PAD K-4®

Sil-Pad K-4 is one of the thermally conductive Kapton® MT based Sil-Pads designed to provide more physical strength and better thermal performance. Kapton polyimide film is a high dielectric, thin, durable material which is less susceptible to burr cut-through or crushing. K-4 is also an ideal replacement for mica and grease, with the added advantages of Kapton. K-4 has enhanced dielectric properties over the Sil-Pad 400. Dielectric strength is 5000 volts. Thermal resistance for a TO-3 style transistor is .4 °C/Watt. Thickness is .006 ± .001 inches.

SIL-PAD K-10®

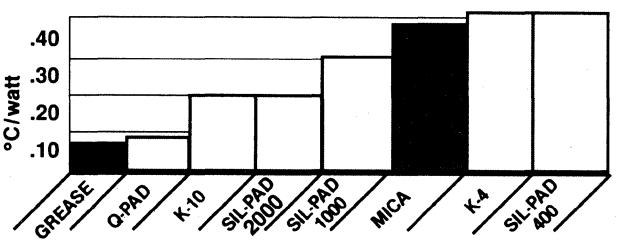
Sil-pad K-10 is the new high performance insulator developed in conjunction with DuPont for critical heat applications. K-10 is made of boron nitride filled silicone rubber and Kapton MT polyimide film. K-10 is the ideal replacement for ceramic materials.such as beryllium oxide and alumina. Sil-Pad K-10 has the lowest thermal resistance of any insulation material available on the market.

K-10 has a thickness of .006 ± .001 inches. The dielectric strength is 5000 volts. Thermal resistance for a TO-3 style transistor is .2°C/Watt.

Q-PAD II®

Q-Pad II is the new thermally conductive material for "grease only" applications. It is designed for those applications where maximum heat transfer is needed and electrical insulation is not required. Q-Pad II is the ideal thermal interface material to replace messy thermal grease compounds. Thickness is .006 inches. Thermal resistance for a TO-3 style insulator is .1 °C/Watt.

THERMAL RESISTANCE (TO-3 Configuration)



SIL-PAD SHIELD

Berguist Sil-Pad shield is a bonded laminate of thermally conductive, electrically isolating Sil-Pad 400 or Sil-Pad 1000 pads with a copper shield between the layers. Sil-Pad shield is typically used under switching power transistors. It is designed to reduce heat sink "noise" and to lower capacitance and EMI, RFI problems at the component level. Special configurations can also be produced. Total thickness is .019 ± .002 inches. Approximate thermal resistance for a TO-3 style is .85 to 1.0 °C/Watt. Shielding effectiveness, 50db or higher.

SPECIAL SHAPES: We produce thousands of specials. Tooling charges are about $100 to $150 for simple parts. Increased complexity or tighter tolerances increase tooling charges.

ADHESIVE: Most materials are available with adhesive on one or both sides.

TOLERANCES: .015 inches are held on width, length and hole location. Contact the factory if tighter tolerances are required.

CUSTOM MATERIALS: Other special materials such as laminates, coatings, etc. are also available.

SHEETS: 6" x 6", 6" x 12", 8" x 8", 10" x 10", or 12" x 12" sheets are available from stock, with or without adhesive.

ROLLS: All Sil-Pad materials are available in roll form, with or without adhesive. Contact the factory.

THE CLEAN, EFFICIENT WAY TO IMPROVE THERMAL CONDUCTIVITY

Thermal Interface Pads

Best Available Case-to-Sink Heat Transfer

POWER DEVICES' THERMAL INTERFACE SYSTEMS - A new, "systems approach" to thermal interfacing

Thermal interface pads from Power Devices utilize a systems design approach that can help engineers maximize the transfer of heat from heat dissipating components while eliminating production bottlenecks and manufacturing problems.

Simply place the pad between the component and its mounting surface and tighten. That's all there is to it - no gloves, tools, special handling, measuring, nor time-consuming clean-up required!

Two Component System - Single-Component Convenience

Each pad has a half-mil thick coating of dry-to-the-touch thermal compound applied to both sides of an application-specific substrate which is then die-cut to conform precisely to the device being mounted.

The proprietary thermal compound eliminates damaging air gaps or voids between the surfaces and the substrate speeds heat transfer, while also acting as a medium, or carrier, for the compound.

Unique Change-of-State Thermal Compound

The silicon-free, non-contaminating thermal compound, dry and solid at room temperature, conformally sets to each mating surface under mounting pressure.

As the temperature increases, its "change-of-state" wetting action allows the compound to fill all voids while its natural capillary attraction to the mating surfaces' interface perimeter prevents migration problems which are common with other thermal compounds.

Substrate Materials To Match the Application

When electrical isolation of the component is required, select ISOSTRATE(TM) thermally conductive electrical insulators with Du Pont Kapton® Type MT polymide substrates.

When electrical isolation is not required, use Type 1100 aluminum alloy substrate THERMSTRATE® Interface Pads.

In Summary

All Power Devices thermal interfaces are dry, easily handled, die-cut pads and so easy to use that installation involves nothing more than placing them in position!

And both electrically insulating and non-insulating Power Devices' thermal interface pads provide unequaled contact thermal resistance for the very best case-to-sink heat transfer available!

Immediate Availability

Both ISOSTRATE and THERMSTRATE are available from factory inventory in a wide variety of standard configurations. Call, FAX, or write Power Devices, today.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

DESIGNER'S NOTES

Atlee laminated bus bars consist of flat conductor layers stacked on one another and separated by appropriate dielectrics. Typically such an assembly is laminated and edge-sealed or encapsulated so that the final product becomes a rigid unit with high reliability and stable electrical and mechanical properties. These properties provide uniform capacity, low impedance, and high-speed transmissions of signal and current. Atlee bus bars are an economical alternative to multi-layer printed circuit boards and wire harnesses. They offer:

- **Lowered production costs,** because assembly is simple and fast.
- **Reduced volume** which permits higher density packaging than possible with wire harnesses.
- **Reduced noise** with ideally distributed capacitance and isolation of conductors.
- **High current-carrying capacity.**
- **Low impedance and inductance.**

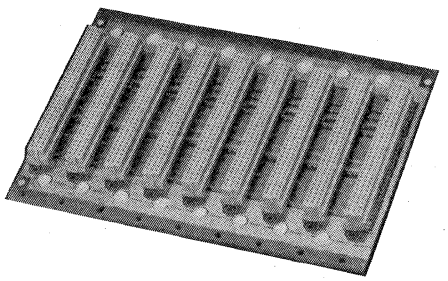
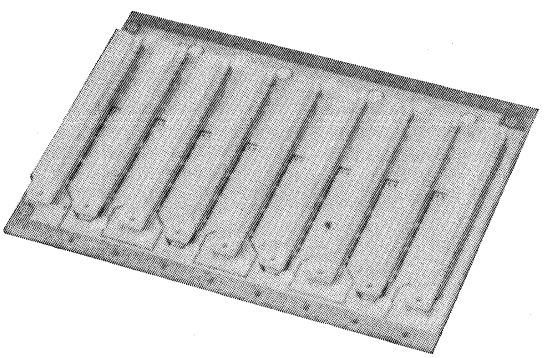
VME P1 BACKPLANES



The P1 backplane is the main VME bus and has been designed as a 6 layer multilayer with signal tracks on layers 1 and 6, Ov on layer 2 and 5 (fully gridded), and "Daisy Chain" on layer 3 and +5v on layer 4. Wide areas of copper between the connectors and to within 8mm of the edge of the board have been allocated to power rails giving the backpanel the ability to deal with power needs to the maximum levels of the VME Specification. Separation of signal tracks (design width 0.38mm) from ground planes is 1mm giving a design characteristic impedance of 100 ohms prior to termination. Priority jumpering is accomplished by means of push-on jumpers or wire-wrapping to the terminals provided between the connector positions, or alternatively to the rear of the connector terminals when long terminals are specified (see ordering information).

Power input, as with the Expansion Bus, is by means of Press-Fit M4 Threaded Studs at the positions specified in the detailed drawing, with the exception of the 4 slot version which has only +12v. −12v. and +5v. on the lower power rails, with 0V and +5V on the upper power rails.

VME P2 BACKPLANES



The P2 backplane is the I/O Expansion Bus and has been designed as a 3 layer multilayer with a signal track on layer 1, and 0v on layers 2 and 3. This method of design allows a controlled characteristic impedance of approx. 100 ohms unterminated since the separation signal tracks from ground plane is 1mm. The additional ground plane, apart from its electrical characteristics, allows the board to be built to an overall thickness of 3.2mm giving it the strength it needs as a structural member in a card frame system.

Power input is by means of Press-Fit M4 Threaded Studs at the 0v and +5v. positions specified in the dimensional drawing.

VME Subsystem Bus (VSB)

VSB is a local subsystem extensions bus which allows a processor board to access additional memory and I/O on the local bus using rows A and C of the P2 and VSB connectors. This reduces the load on the main bus and improves the overall throughout of the system. The VSB4 backplane can be rear-plugged on to an existing VME J2 backplane.

VSB4 has been developed using 4 layer, 3.2mm thick pcbs, and conforms to VSB specification Rev A.1 providing for 2 to 6 slots. The backplanes use high quality press-fit DIN 41612 connectors. In accordance with the VSB specification, VSB4 provides for a jumper between connector pins J2A31 and J2C32 to ensure continuation of the BGIN*/BGOUT* daisy chain when a VSB slot position is left unoccupied.

A small 4HP wide detachable module provides VSB termination. The module is mounted to the rear of the VSB backplane, taking up minimal space, and may be permanently bolted to the backplane using connector bolt holes. Providing resistive termination for all VSB signal lines, the module is suitable for all backplane widths up to six slots. One module is supplied with each backplane.

Conforming to the VSB specification, the VSB backplane has been provided with power pickup points which are placed along the top margins of the backplane for all +5V and Ground requirements.

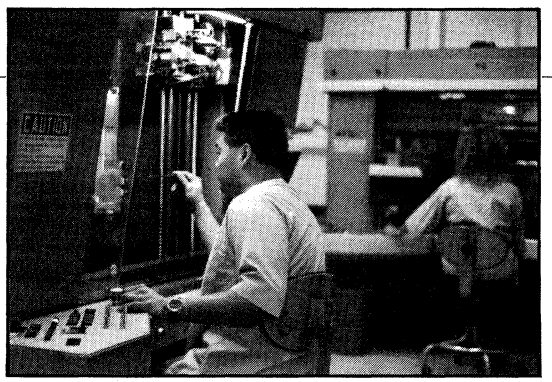
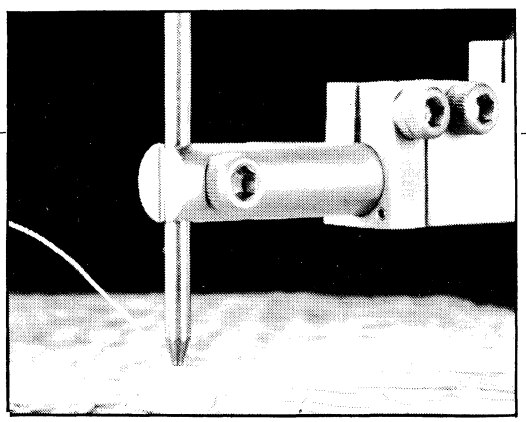
EMS AUTOMATED SERVICES

AUTOMATIC AND SEMI-AUTOMATIC WIRE WRAPPING

Quick, seven-day turnaround, including data processing, is standard. Four day turnaround is available. All wiring is 100% inspected to MIL-STD-1130 and EIA STD RS-280-A for unacceptable wraps, wire dressing and tightness, and wrap levels. EMS also offers a zero wiring error guarantee on tested panels.



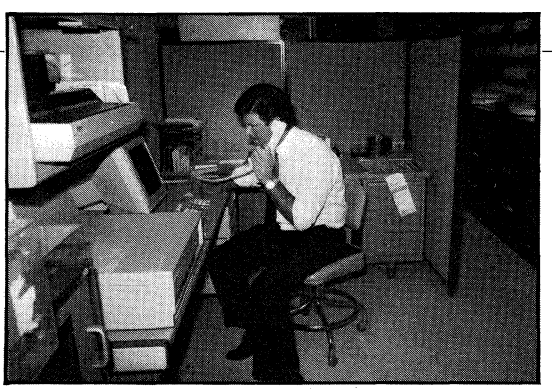


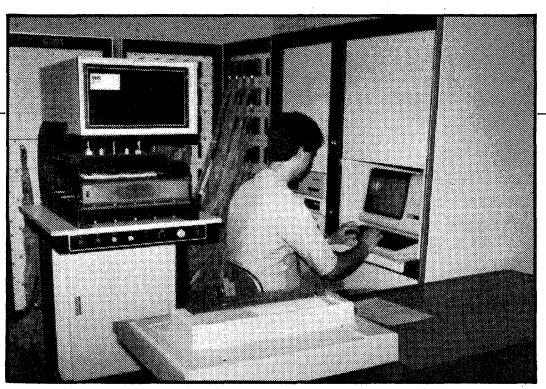
STITCH WIRING SERVICES

EMS provides semi-automatic stitch wiring services for prototype or production work. Stitch wiring can be used for a wide variety of commercial and military applications including ground support, shipboard, airborne, satellite and torpedo systems. Bonds are tested to U.S. Navy Specification WS14783. An excellent discrete wiring system for use with high speed circuits and low-profile applications.

DATA PROCESSING SERVICES

Wire lists are created from floppy disk, tape, schematics, or card decks by our in-house data processing department. Data can also be transferred via telephone modem. Extensive error-trapping software detects design flaws, helping to ensure an error-free end product. Quick telephone notification to customers of wire list errors helps keep projects on schedule.





TESTING SERVICES

EMS tests bare printed circuit boards for as little as 50 cents a piece. Wire wrap boards and backplanes receive 100% continuity test to guarantee zero wiring errors. 500 voltage testing is available. EMS also manufactures test fixtures to customer requirements.

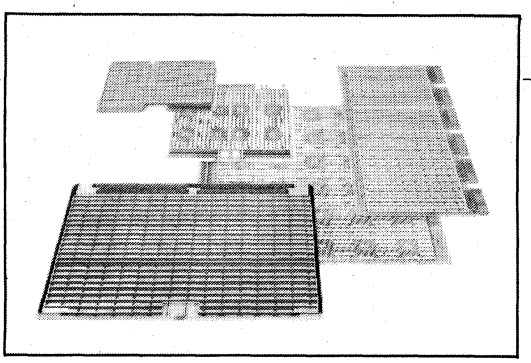
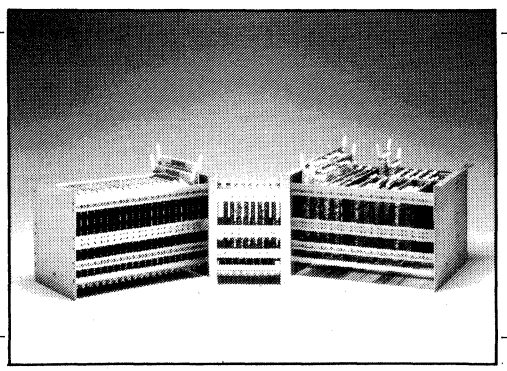
EMS PACKAGING SYSTEMS

PRINTED CIRCUIT BOARDS
for discrete wiring applications



EMS manufactures a complete line of circuit boards for both wire wrapping and stitch wiring. Our Metric Series boards give high-speed circuit performance in the Eurocard format. The Metric Series offers a variety of sizes, with configurations for High-Speed Universal TTL, Schottky, and ECL technologies. In addition, EMS stocks boards for various bus systems including VME, Multibus, S-100, PC-bus, and Q-bus. (Refer to page 3 for engineering detail).

Our fully staffed engineering department can handle all your needs for custom board applications as well. In-house Computer Aided Design (CAD) gives us complete project control and reduces turn-around time.



CARD RACKS

Ruggedized aluminum construction makes EMS printed circuit card racks ideal for heavy duty applications. A wide variety of vertical and horizontal racks are available in rack mount and freestanding configurations. Mixer racks allow the use of various sized cards in the same rack. Many models are available with side mount cooling fans for crossflow convection cooling. All material and workmanship is guaranteed.

BACKPLANES

EMS' high speed backplanes use 4 layer construction and massive inter-pin power and ground planes to optimize high speed performance. TTL, Schottky, and ECL backplanes have dedicated power and ground pins, while the High Speed Universal (HSU) design allows user dedication of all pins. EMS can supply custom backplanes to meet your specifications.

CUT AND STRIPPED WIRE-WRAPPING WIRE

Sizes ranging from 3.0″ to 25″ are in stock. Larger sizes are available on request, with one-day delivery. Other wire services offered include cutting and stripping customer-supplied wire, twisted pairs, trios, and 250′ and 500′ spools. We carry 30-, 28-, 26-, and 24-gauge Kynar in stock. Bulk wire is stocked. Call for quotation. The Mini Wire Bin, with 28 tubes holding 500 wires to 12½″, 250 wires from 13″ to 25″, provides low-cost storage. Bin kits for 30-, 28-, 26- and 24-gauge wire come fully loaded with various wire lengths. Send for our catalog.

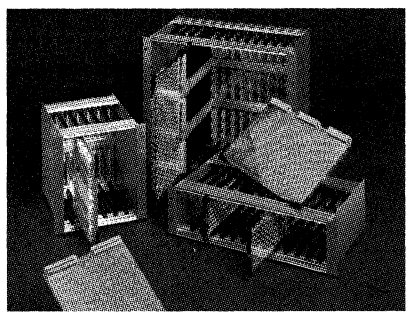
96-PIN DIN/IEC

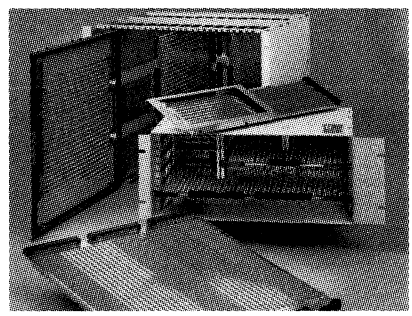


Mupac is highly responsive to your 96-pin DIN/IEC compatible packaging hardware needs. Requirements for functionality, speed, and performance in a modular packaging system are combined with Mupac's advanced manufacturing procedures to produce Mupac Metric; the 96-pin DIN/IEC compatible standard packaging hardware that works together as one integrated solution to your IC packaging requirements.

Mupac's comprehensive family of standard packaging hardware includes subracks and power backplanes that can handle up to 26 boards in depths that go from 160mm to 400mm and range in height from 3U to 12U in easy-to-use modular increments.

Our Metric wire wrap boards feature Mupac's patented 4-layer Schottky construction. This design maximizes the conductivity and capacitance characteristics of the board, which are the power source and ground reference of the high speed ICs, while minimizing the effects of system noise, ringing, and propagational delay.

Standard 108-PIN



Mupac offers a versatile range of standard packaging building blocks that enable you to translate your designs into full prototypes and complete systems faster and with fewer restrictions than any other product on the market today. It's Mupac's system approach to packaging your system and it's complete down to the smallest detail.

Mupac's comprehensive family of high speed packaging hardware includes horizontal and vertical racks, 4-layer Schottky wire wrap boards, power backplanes, mounting hardware, cable assemblies, connectors, and other accessories.

Our system allows you to package as little as one single 108-pin connector size Schottky wire wrap board that measures 4.5" × 8.125" to as many as thirteen 347 series high density wire wrap boards that measure 14.9" × 16.125" and hold as many as 480 IC's each based on 16-pin devices.

Mupac's patented Schottky compatible boards are designed to maximize the conductivity and capacitance characteristics of the board, minimize system noise, ringing and propagational delay, and enhance the rise and fall times of the signal.

We're Committed—

Mupac is committed to being the world leader in high performance backplanes and system packaging products. As part of this commitment, we will be at the forefront supporting new emerging bus platforms with backplanes as well as complimentary packaging products including our standard and custom enclosures complete with subrack, backplane, power, and cooling.

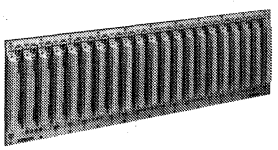
Uncommitted Backplanes



Multilayer construction and massive, three ounce copper voltage and ground planes for high performance applications. Four independent power layers, one can be split between AUX A and AUX B, for extremely low impedance power distribution. All connector pins are isolated from power layers and from other pins; pins are assigned by user for maximum flexibility. Off-board termination (modules available separately) can be used for termination according to VME J1 or J2 specifications.

Positions provided for decoupling capacitors, power to ground and ground to chassis. I/O connector mounting areas provided adjacent to A and C rows of each slot.

Ordering Options:

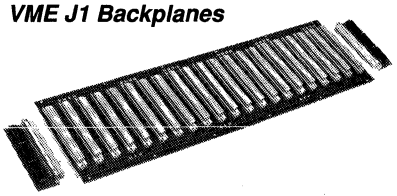
• Power connectors: Power Bugs, Mate-N-Lok®, both, or none.

• Power Pick-up Pins: gold-plated Wire Wrap pins installed at factory, or no pins installed.

VME Backplanes

Fully assembled and tested, VME Backplanes include pressfit, 96-pin female DIN connectors spaced at 0.8" centers. Recommended for use with Vector Europackaging subracks. Contact factory for custom configurations.

VME J1 Backplanes



Six-layer construction, controlled impedance design, for integrity and reliability. Massive copperclad power and ground planes on opposite board sides; patented shielding technique effectively blocks both capacitive and inductive coupling.

Off-board termination, modules supplied. Standard +5V and GND access provided through Mate-N-Lok® connectors (mating connector housings and pins supplied). Extensive labelling on board identifies IACK and IACK OUT pins and other information.

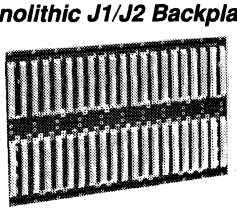
VME J2 Backplanes

Featuring off-board termination (modules supplied). Available in sizes corresponding to available J1 backplanes.

VMX Backplanes

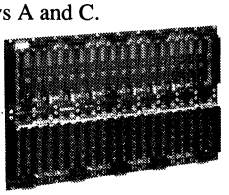
Multilayer construction, VMX backplanes provide pin assignments for A and C connector rows according to VMX specs. With power connectors on-board, VMX backplanes can stand alone in Vector subracks.

VME Monolithic J1/J2 Backplanes



Eight-layer monolithic (J1 and J2 combined) backplanes handle massive power and speed requirements. Ground layers separate signal and power layers, effective preventing crosstalk between signals and power plane.

Featuring on-board termination, Molex® connector for access to SYSRESET, SYSFAIL, and ACFAIL lines; positions for decoupling capacitors (power to circuit ground and circuit ground to chassis) for maximum protection against resonance and crosstalk; mounting areas adjacent to J1 connectors for I/O to J2; and I/O mounting areas (ribbon cable) adjacent to J2 rows A and C.

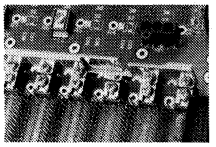


Several Ordering Options:

• Power connectors: Power Bugs, Mate-N-Lok®, both, or none.

• J1 I/O connectors: with gold-plated, double-tailed Wire Wrap pins installed, or no pins installed.

• Decoupling capacitors: power to ground only, ground to chassis only, both, or none.



Massive power Bus Bar (Part No. BB21S, available separately) can be used with Power Bugs for excellent power distribution and greatly simplified power hook-up.

Vector Backplanes also are available mounted into Vector Card Cage assemblies, see EEM Volume C, Section 1400: Cabinets, Enclosures, Racks, and Chassis.

EQC UV is a Quick/Connect board specifically designed to deal with the problems of mounting Pin Grid Arrays and other non dual-in-line devices, and for boards with large amounts of analogue circuitry. Whilst the majority of the board area is populated in our standard pattern for dual-in-line devices, a central section has been pre-drilled on 100″ grid, 16 × 92 holes, to accept individual sockets QC-5068-175 installed by the user. In this way, devices can be accommodated where needed, and quickly connected using standard Quick/Connect tools.

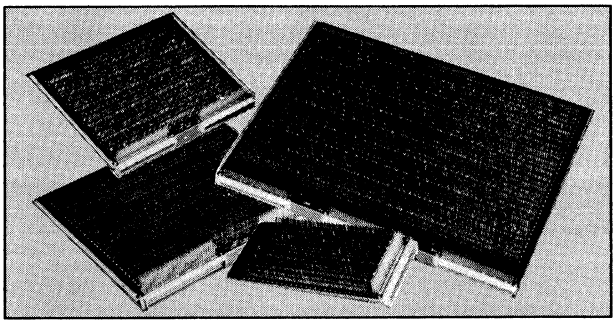
dataCon — WIRE-WRAPPABLE BOARDS

VMEbus-COMPATIBLE IC PLUGGABLE WIRE-WRAPPABLE BOARDS



To meet the skyrocketing worldwide demand for VMEbus board level products, dataCon now offers a complete range of IC pluggable wire-wrappable boards in a variety of VMEbus configurations. These boards, designed to conform fully to VMEbus specifications, combine the packaging ease of pluggable assemblies with the field versatility of wire-wrapping.

Available for virtually any VMEbus system application, dataCon offers these boards in four basic sizes, including standard, half-wide, double-wide and double-wide/double-high, and in a variety of pin configurations to accommodate up to 252 IC devices for high density packaging.

As desired, dataCon VMEbus boards can be furnished with one-, two-, or three-level wire-wrap posts and with hole patterns either perpendicular to or parallel to I/O rows. In addition to standard .800″ spacing between boards, .700″ spacing can also be furnished for higher density packaging of boards in racks and enclosures.

All dataCon wire-wrap posts are extremely straight, milled square posts, positioned within .010″ of true center for precise wire-wrapping. All posts have sharp, square corners (within a .003″ radius) for reliable, gas-tight connections with 40 years expected life. Posts can be tin or gold plated.

Accessories for dataCon's VMEbus boards include front panels, pull handles and ejector keys. High density Eurocard connectors can also be furnished. Racks and backpanels for the VMEbus boards will be available as accessories.

Materials:

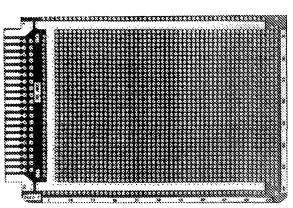
Contacts Only Pattern

Boards are bare except for edge connector contacts. Available with connector contacts committed for general purpose applications, or to bus specific specifications. Contacts Only boards provide unrestricted component placement and accommodate both wire wrap and solder connectors.

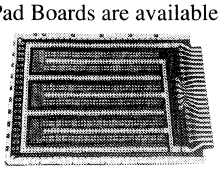
Pad-Per-Hole Pattern

For convenient mounting of DIPs and other components, Pad-Per-Hole Boards features 0.80" diameter, isolated solder pads around all holes, both sides. Most boards in this pattern have plated-thru holes.



3-Hole Solder Pad Pattern

3 hole, solder coated pads for convenient connections to IC leads and sockets, or axial-lead resistors and capacitors. Interleaved voltage and ground buses for overall accessibility. Board capacities can be maximized by mounting DIP IC sockets and other components over bus lines. Wire Wrap pins for 3-Hole Solder Pad Boards are available separately.



Bus Patterns

Voltage and ground buses (or planes) are incorporated into an overall circuit pattern for most Vectorbords®. Other boards combine circuit patterns with one of the bus designs described below. Still other boards are manufactured with "buses only," for maximum design flexibility. All Vectorbord® bus surfaces are solder plated for user convenience.

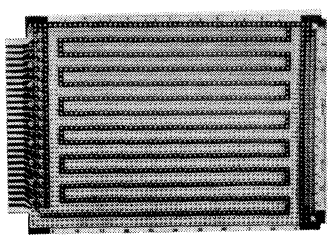
Bus patterns include:

Interleaved Bus Pattern: The Interleaved Bus Pattern originates at I/O area and is traced, voltage and ground in opposite directions, along the board perimeter. Both buses then are interleaved, or alternated, across board surface for overall accessibility. Interleaved buses may be etched onto one side of board only, or onto both sides of board, back to back and with plated-thru holes.



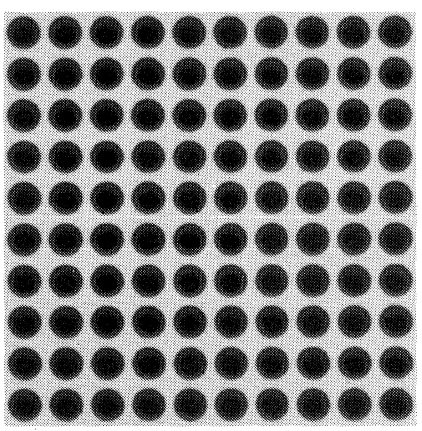
Peripheral Bus Pattern: Voltage and ground bus lines trace a path around board perimeter. Peripheral buses may be on one side of board, or back-to-back on both board sides with plated-thru holes.

Zig-Zag Buses: Zig-Zag shape provides access to voltage or ground at alternating holes.

Voltage/Ground Plane Pattern

Overall power and ground planes on opposite board sides, with 0.085" diameter clearance pads around holes, both sides. Pins are committed easily to either plane using solder washers or connecting eyelets (available separately). Massive copper planes provide optimum signal performance – distributed capacitance, low inductance, low noise – and are ideal for DIP ICs, wire wrap posts, and socket pins.

Voltage/Ground Planes may be two-sided, one sided and combined with other Vectorbord circuit patterns, or one sided with edge contacts only on the other side.



Extenders

For in-system testing of functioning circuits. Construction is either FR4 epoxy glass or epoxy glass composite, with nickel/gold plated edge contacts, and gold plated socket contacts. Receptacles are installed and connected to 2 ounce etched circuit line on the board. Receptacle tabs in most models are designed to accept test clips or probes.

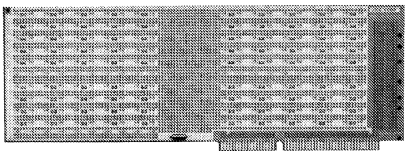
Bus Specific Prototyping Boards

Vectorboard® Plugbords™ for specific bus architectures. Available in circuit patterns described in the general purpose Plugbord™ section – also available in high performance Vectorbord plus™ and Pads & Planes™ patterns for IBM and Macintosh machines.

VECTORBORD plus™ Pattern

High performance prototyping boards – optimized for wire wrap. Full voltage and ground planes are on opposite board sides. Holes are 0.055" diameter on 0.1" grid, with 0.085" diameter clearance pad around holes on both sides. DIP mounting areas accept all standard lead spacings. Large PGA areas provide for mounting most PLCC and PGA devices. Vectorbord plus™ boards also provide mounting positions for SMD decoupling capacitors for superior noise and resonance blocking. SMD caps and socket pins installed as an option.



Pads & Planes™ Pattern

The Pads & Planes™ Pattern is designed for high performance circuitry, unrestricted component placement, and for mixing wire wrap and solder components on the same board. Full voltage and ground planes are on opposite sides of board. Holes are 0.042" diameter, plated-thru on 0.1" grid with 0.080" diameter isolated solder pad around each hole, both sides. The overall hole pattern provides for mounting DIP IC devices, as well as PLCC and PGA devices. Pads & Planes™ Boards also include mounting positions for SMD (Surface Mount Device) decoupling capacitors. SMD caps are installed as an option on some boards. All pad and plane surfaces are solder coated for user convenience.

YOUR MAGNETIC SHIELDING PROBLEMS END HERE!

Request AD-VANCE Magnetics' new 84-Page Procurement Catalog/Engineering Manual; offers magnetic shielding users the major technical guideline data needed to design or choose the optimum magnetic shielding solution for a given application.

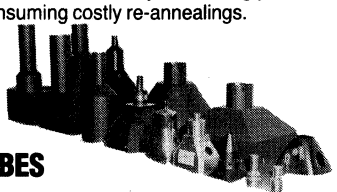
CUSTOM FABRICATED SHIELDS FOR COMPONENTS AND SYSTEMS

Any Specified Configuration or Shielding Requirement

From the simplest component to the most complex system, Ad-Vance Magnetics can design and fabricate an AD-MU shield incorporating your magnetic shielding performance requirements.

These include magnetic isolation chambers, shields for low field research, magnetic shielding components required in systems (such as CRT's), transformers, motors, tachometers, reed relays and computers, dewars for cryogenic research, various test chambers, video cameras, scan converter tubes, photomultiplier tubes, storage tubes, aircraft weather radar display tubes, etc.

Lasting shielding protection is provided because AD-MU alloys do not saturate when properly used, will not suffer excessive permeability loss from shock, and display minimum retentivity. Accordingly, there is no need for repeated time consuming costly re-annealings.



AD-MU CUSTOM FABRICATED SHIELDS FOR CATHODE RAY TUBES

Enhance CRT performance by eliminating effects of external magnetic fields on the electron beam.

Ad-Vance already owns tooling for many types of magnetic shields used during the past quarter century, making tooling savings possible. Or, our Engineering Dept. will gladly help design and produce the optimum shield for your application.

AD-MU TAPE DATA PROTECTORS ASSURE FIDELITY OF VALUABLE TAPES

1 Assure fidelity of vital recorded information by keeping data on magnetic tapes free from distortions caused by unforeseen external magnetic fields.
2 Minimize erasure accidents during safekeeping or transport.
3 Discourage and deter the covert saboteur or vandal.
4 Excellent insurance against possible expensive, or irreplaceable losses.

INEXPENSIVE INSURANCE IN THESE UNCERTAIN TIMES

Proven AD-MU Tape Data Protectors and Cassette Tape Data Protectors provide inexpensive insurance against such hidden hazards.

Satisfied customers include all branches of the armed forces, NASA, and numerous private firms as well as other governmental organizations.

There is not a single reported instance in which tapes enjoying such secure protection have ever been affected by stray magnetic fields. The investments in such tapes have remained uniformly safe from harm.

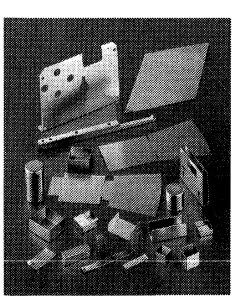
AD-MU SHEET STOCK — DELIVERY FROM STOCK

- For your in-house designing and manufacturing convenience.
- Easy to work, bend, stamp, draw, finish, etc. on ordinary sheet metal working equipment. SHIELDS MUST BE HEAT TREATED before end use or further finishing by plating, painting, etc.

JUST CUT AD-MU FOILS TO THE EXACT SHAPE YOU NEED



These Time-Saving High and Low Permeability Foils offer convenient, economical magnetic shielding. In many applications, their use can eliminate the costs of designing and manufacturing pre-fabricated shields. Foil shielding is also useful in hard-to-get-at-places. In addition, it permits more compact assemblies, accomplished by placing magnetically reacting components closer together with no performance degradation.

The foils exhibit useful ductility, so are readily hand trimmed to your desired outline on an ordinary cutting board, or with shears. They are then easily hand formed around the structure or component to be shielded. Simple adhesive tape can be used to hold them in place. They have already been properly heat treated so are ready for immediate use.

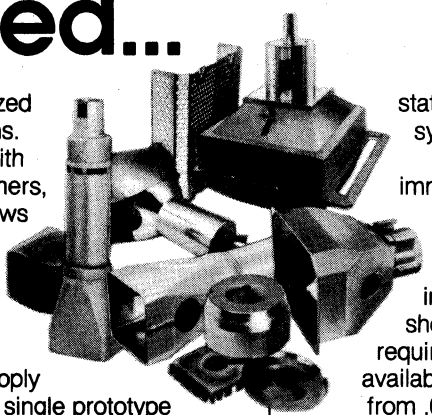
The Problem Solving Magnetic Shielding Specialists—4 Decades of Magnetic Shielding Leadership

If we'd been there, maybe the Pterodactyl wouldn't have crashed...

...at least not the radio-controlled mechanical replica built for the Smithsonian Institution. While it flew successfully twenty-one times over the deserts of California, on its first flight near Washington, D.C., the pterodactyl lost control and crashed.

It was determined that an electro-magnetic device on the ground had interfered with the model's electronic control components. Appropriate magnetic shielding might have saved this pterodactyl from extinction.

For over twenty years, Amuneal has provided electromagnetic interference solutions for military, medical, scientific, industrial and commercial applications. You'll find our products in CRT displays and defibrillators, in computers and spacecraft, in scientific instrumentation across every frequency and spectrum, and in hundreds of specialized applications. Working with our customers, the list grows daily.



If you need magnetic shielding, we can supply you with a single prototype unit or a large production run—and we do it on time and competitively priced.

Give us a drawing of the device you want shielded and we'll select the proper alloy and suggest the most cost-effective way to design, fabricate, hydrogen anneal, and test your shield. All Amuneal products are manufactured and annealed in-house to MIL standards, including welding certification to MIL-W-6858 and MIL-W-8611, and inspected to our fully-documented, statistical quality control system (MIL-I-45208A).

We also offer immediate delivery from stock on Amumetal (80% Ni) and Amunickel (49% Ni) in both sheet and foil, sheared to your size requirements. Sheet is available in thicknesses from .014" to .062." Foil, in thicknesses from .002" to .010." All material can be delivered hydrogen-annealed for maximum permeability and attenuation.

For your next EMI/RFI, Tempest or room shielding material requirement, call or write Amuneal.

We're liable to keep your project from crashing.

In Ferrites for EMI suppression...

WE'RE INNOVATORS — NOT IMITATORS

WE'RE FAIR-RITE

While other ferrite manufacturers exploited existing markets, our R&D looked to the future—and keeps looking—to find better ways to put ferrite to work in the control of Electromagnetic Interference.

In addition to the beads and sleeves which are industry standards, we developed most of the ferrite EMI suppressors widely imitated today, and were the first to offer what has become a series of Engineering Evaluation Kits.

No other source offers faster service and more tooling know-how for unique shapes than Fair-Rite Products.

When it comes to EMI ferrites, the leaders come to Source One for quality, service and price from a U.S. manufacturer that supplies the world—FAIR-RITE

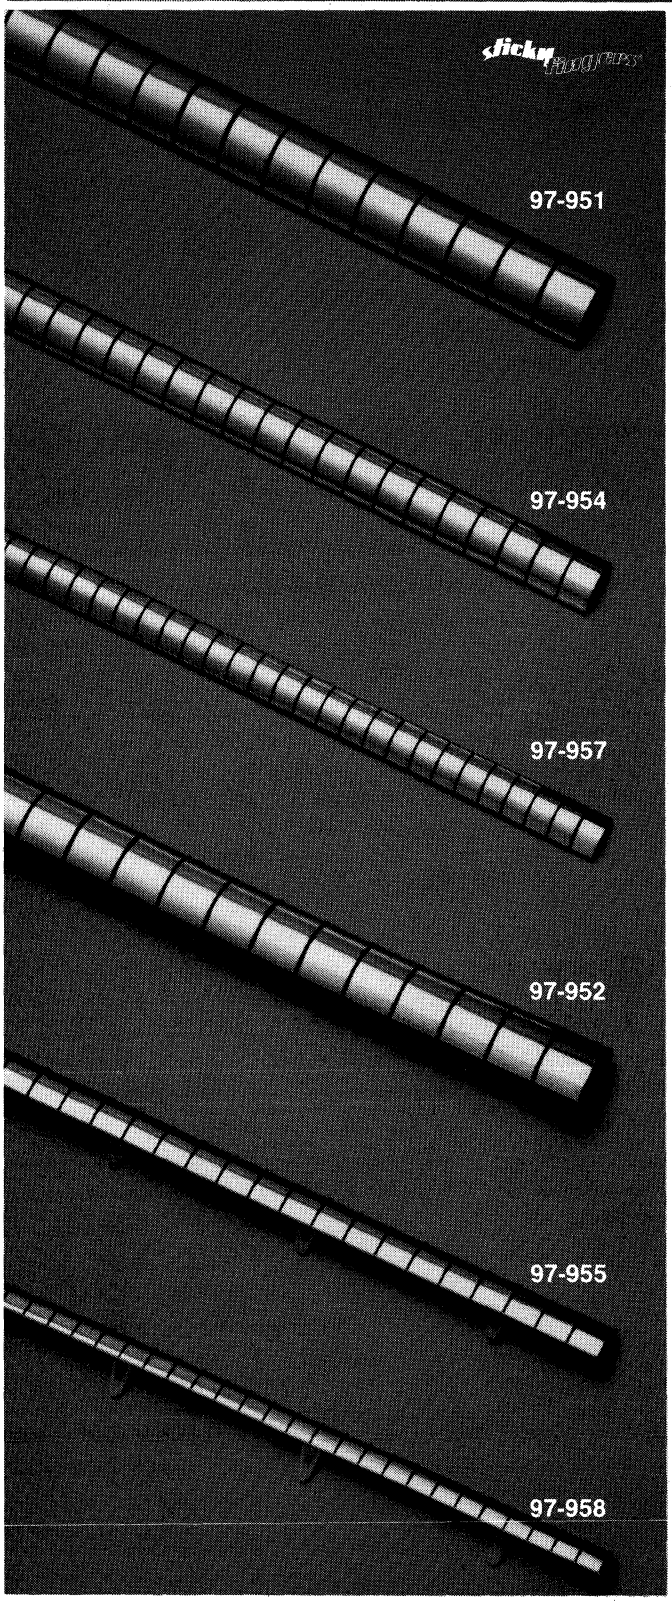
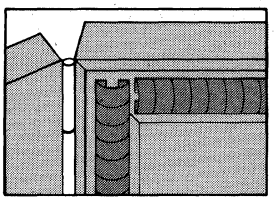
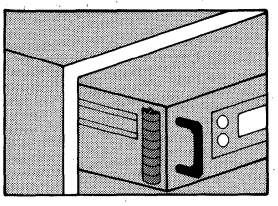
Shielding — Symmetrical Slotted Shielding (S^3)



All strips exhibit typical minimum values of 100dB at 100 MHz.





With Sticky Fingers®

Series 97-951/954/957 are low-compression, adhesive-mounted beryllium copper shielding strips. Designed as a continuous band, the strip is slotted to permit spring contact throughout its length. A generous radius profile provides for the greatest incident engagement angle with the lowest force. As with all Sticky Fingers® shielding strips, a self-adhesive tape makes mounting easy and secure.

With bi-directional rivet mount

Series 97-952/955/958 are as described above, but with the addition of an integral pierced track to provide for mounting with .21″ (5,3 mm) long nylon push rivets in a .125″ (3,2 mm) dia. hole.

Designed especially for slide applications, this configuration allows total symmetrical compression action with bi-directional engagement. It is recommended for high-temperature and/or extremely high side-load situations, such as PC board connections and electronic drawers.

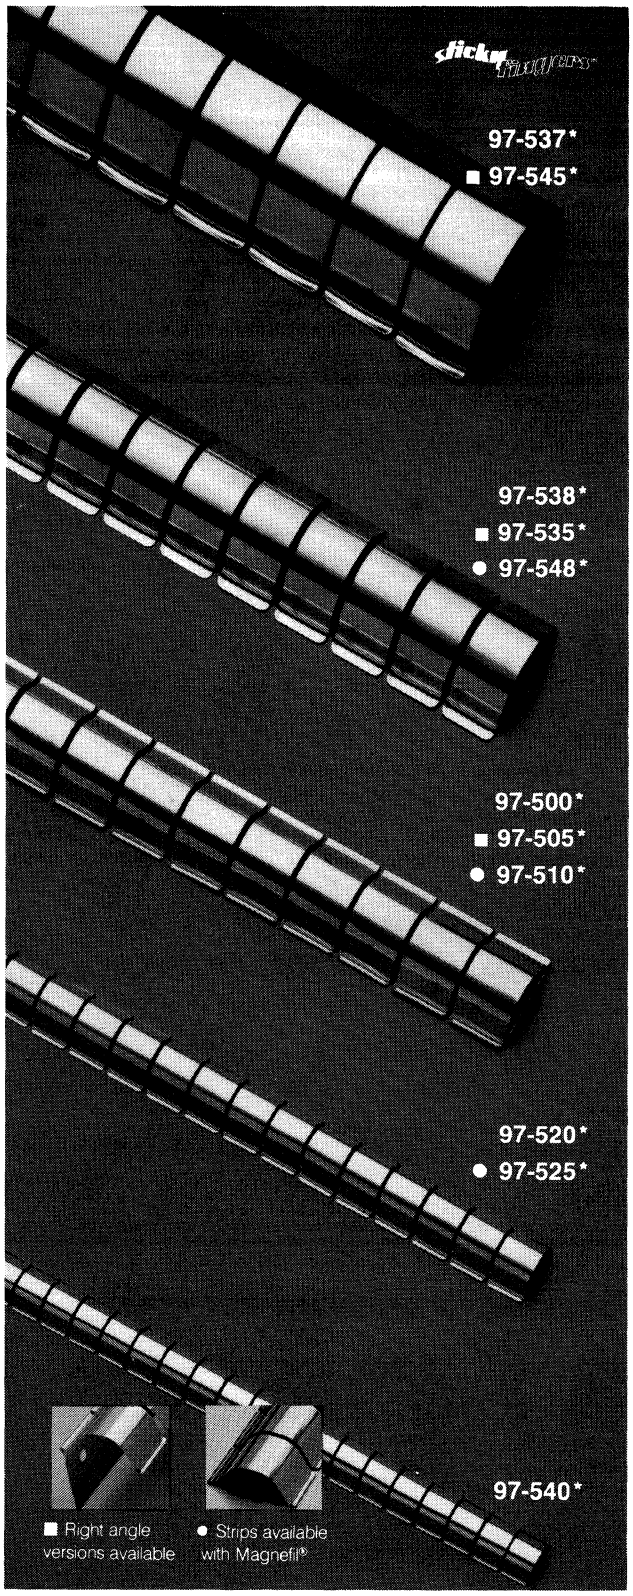
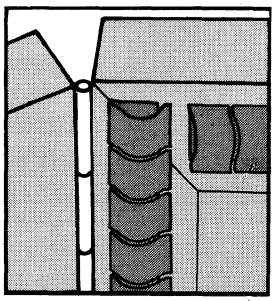
Shielding All-Purpose Gaskets



*Patent No. 3504095



These versatile shields are high-perfomance beryllium copper shielding contact strips with Sticky Fingers® self-adhesive backing. They provide an extremely tight, instant bond, and are ideal as an all-purpose contact strip for metal cabinets and electronic enclosures, particularly where space is critical.

Shielding effectiveness of these strips has been proved to be greater than 46 dB at 14 kHz magnetic, and 108 dB at 10 GHz plane wave. When tested per MIL-STD-285 for electromagnetic shielding, these strips showed superior performance under minimum compression. They proved to be especially effective where variations exist in the space to be shielded, and in applications that require high shielding performance despite frequent opening and closing of the cabinet.

Strips 97-500 and 97-538 are furnished in standard lengths of 24″(610 mm), and in continuous 25-ft (7,6 M) coils. Series 97-520 and 97-540 are supplied in standard 16″ (406 mm) lengths and in 25-ft (7,6 M) coils. 97-537 strips are in 12″ (305 mm) lengths. All are available in your choice of finishes (see page 30).

Please note that designated strips are available with Magnefil®, a rubber strip filled with magnetic particles, and inserted within the curve of the fingers. Magnefil provides increased magnetic field shielding.

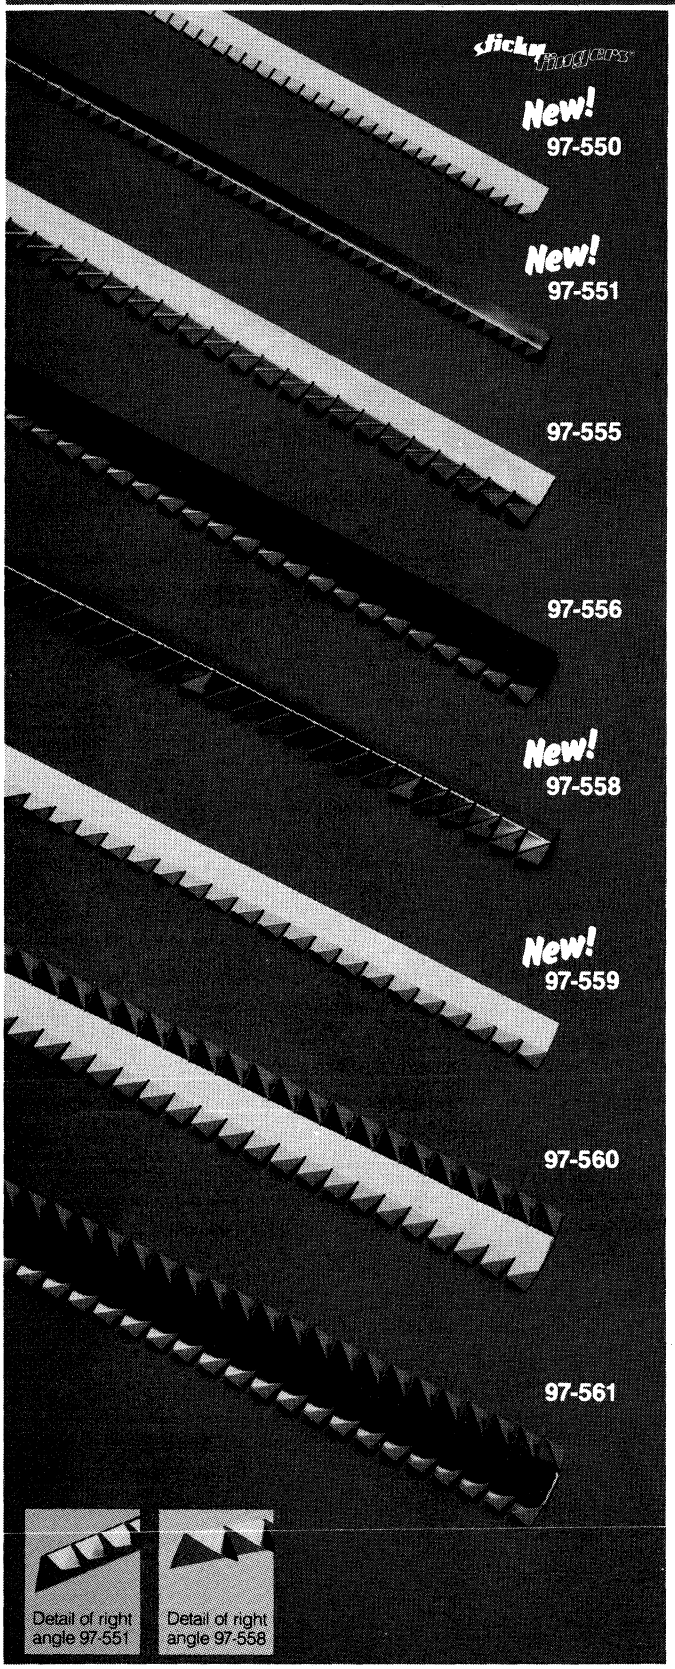
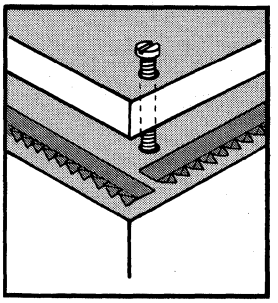
Twist Series





Self-adhesive beryllium copper contact strips with scientific twist design offer narrower-than-ever electronic gaskets for general shielding applications where space is at a premium.

Four different widths are available to suit your specific application for single edge contact strips. Also available are two 90 degree versions (Series 97-551 and 97-558) to provide alternate mounting capability. Series 97-555, 97-558, and 97-559 provide shielding effectiveness greater than 85 dB at 100 MHz plane wave, ideal for all types of panel or electronic enclosures. Series 97-550, 97-551, and 97-560 on the other hand, provide shielding effectiveness greater than 115 dB at 100 MHz plane wave. Series 97-560 strips are especially suitable for cabinets with panel-divider bars. Their unique double-edge design permits panels to be removed easily and replaced without damage to the installed strip.

Poron environmental rubber gasket

Series 97-556 and 97-561 are versions of 97-555 and 97-560, respectively, incorporating a Poron rubber gasket to act as an environmental shield, offering a high degree of protection against dust and moisture.

All twist series strips are furnished in 24" (610 mm) lengths. All strips except 97-551 and 97-558 are also available in standard 25-ft (7,6 M) coils. Parts may be supplied with holes for cleaning and plating purposes. These holes will not affect the overall performance of the product. Available in standard finishes (see page 30).

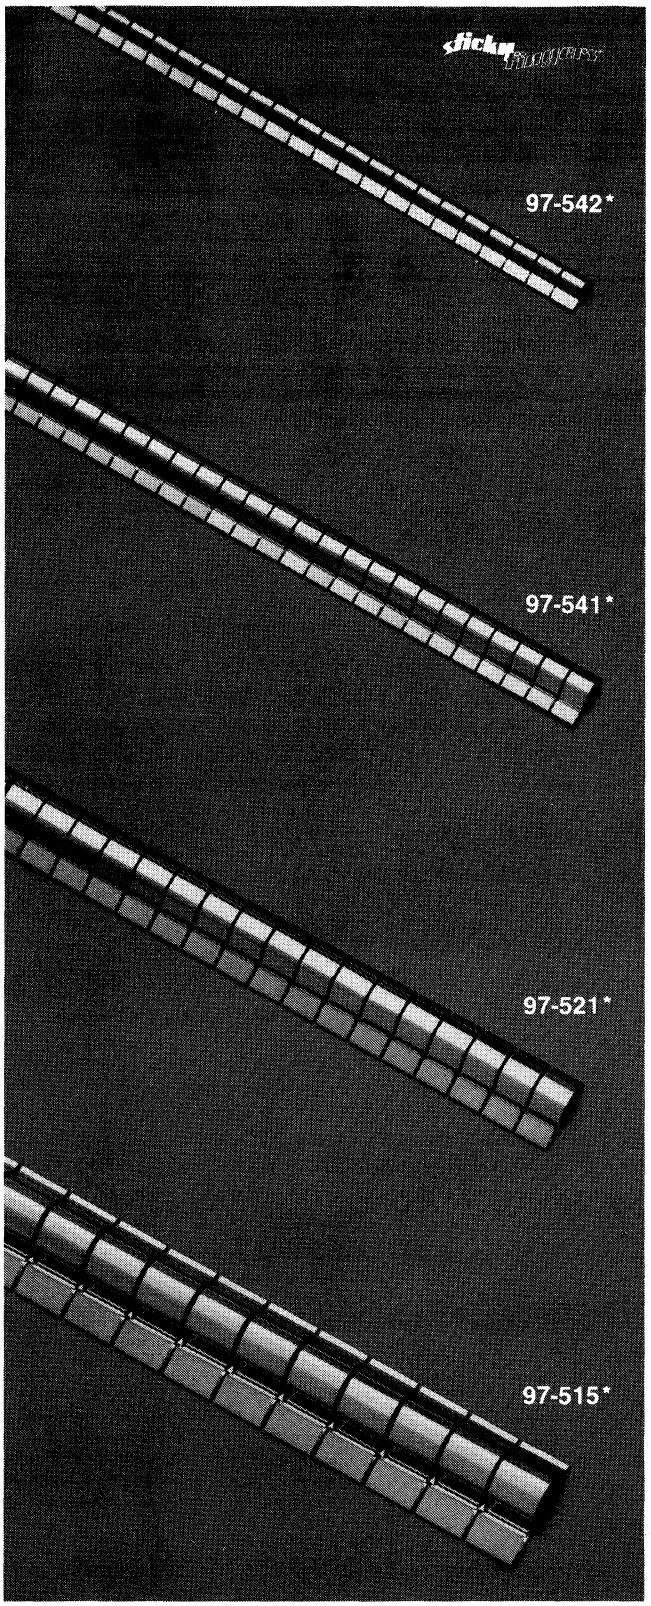
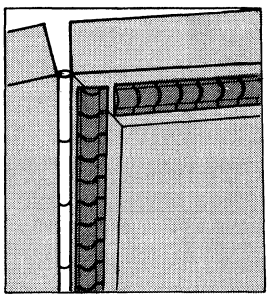
Shielding Foldover Series





This version of Sticky Fingers® beryllium copper shielding gaskets features a special U-shaped end that permits the upper part of the strip to slide when enclosure doors are closed. It also retains the strip's fingers when enclosure doors are open, thus protecting accidental damage to the strip's fingers.

Four models provide you a choice of widths to suit your application. They are available in standard 16″ (406 mm) lengths, except 97-515 which is furnished in 24″ (610 mm) lengths. Also, all styles are available in continuous 25-ft (7,6 M) coils, and in your choice of all except tin lead and satin tin finishes (see page 30).

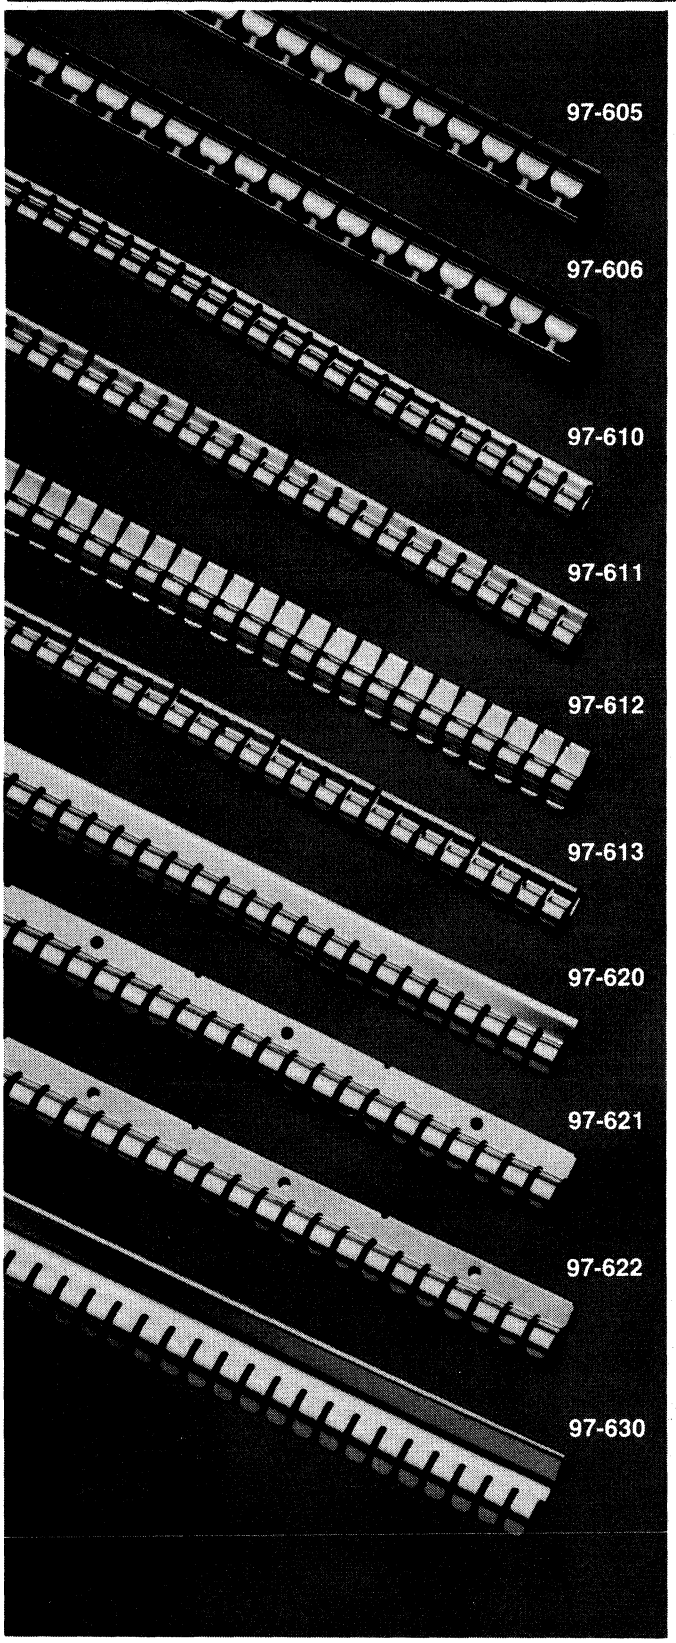
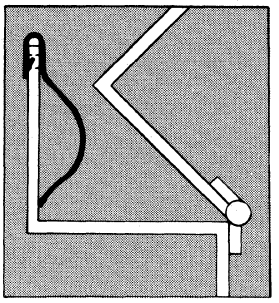
Shielding Clip-On Gaskets

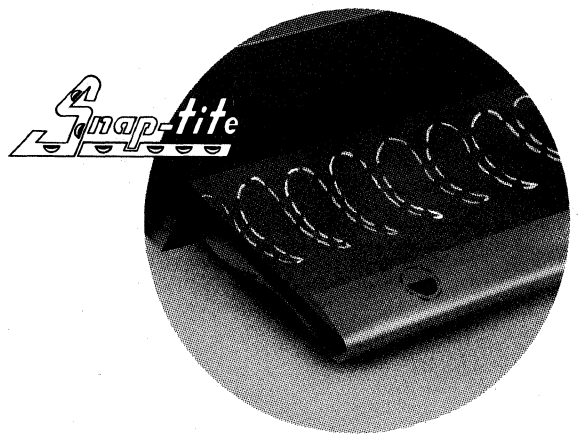




This series from Instrument Specialties is designed for use where high temperature or other considerations preclude the use of adhesive-mounted gasketing. Yet it provides the same shielding characteristics and effectiveness as our Sticky Fingers® mounted series.

Snap-tite™, with "D" lance

This configuration has been designed specifically to provide outstanding holding power. "D" lances snap into drilled or punched holes in the mounting surface to create a strong omnidirectional grip and excellent conductivity.



Grip-tite™, with "T" lance

Ideal for use with softer materials, such as aluminum, sharp "T" lances bite into the mounting surface and preserve electrical conductivity.

All configurations in these series are available in 16″ (406 mm) lengths and in all standard finishes (see page 30). Parts may be supplied with holes for cleaning and plating purposes. These holes will not affect the overall performance of the product.

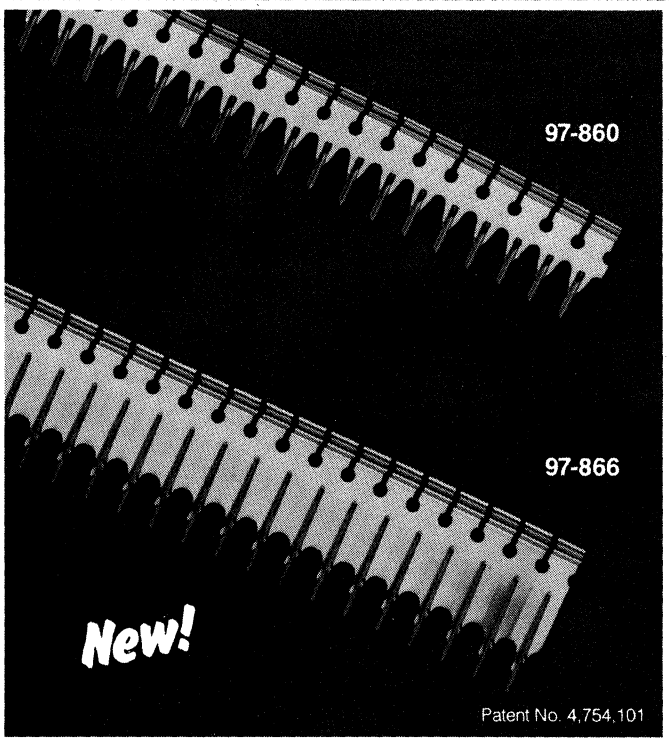
Shielding Printed Circuit Board Shields



The PC Board Shield is a modular enclosure system which is solder-mounted on a circuit board. The enclosure controls EMI problems such as emissions, susceptibility, and cross-talk for a portion of the components. The shield can be used on any through-pin double or multi-layer board which is designed to accept it. The shield can conform to areas of any shape or size, including L and C shapes, that are difficult to shield with conventional methods. The standard fence material forms the walls of the enclosure, and the top is made of any flat metal. Since the top is flat, expensive forming tools are never needed. The cover is held in place by spring force alone, and can be removed without special tools to access the components. To facilitate soldering, both part numbers 97-860 and 97-866 are supplied with pre-plated Satin Tin finish (bare edges). Also available as mill finish phosphor bronze.

For further design consideration, please refer to pages 4 and 5 of this catalog, or contact us directly for engineering consultation.

CO-NETIC magnetic shields improve the amplification characteristics of photomultiplier tubes by providing significant attenuation of magnetic fields. Effective shielding is ensured over a wide range of field intensities. When grounded, the shields provide protection against electrostatic interference.

CO-NETIC shields are highly resistant to shock and vibration. The shields have minimal retentivity and do not require periodic re-annealing.

Request catalog PM-5, which lists recommended shields for over 460 photomultiplier tubes.

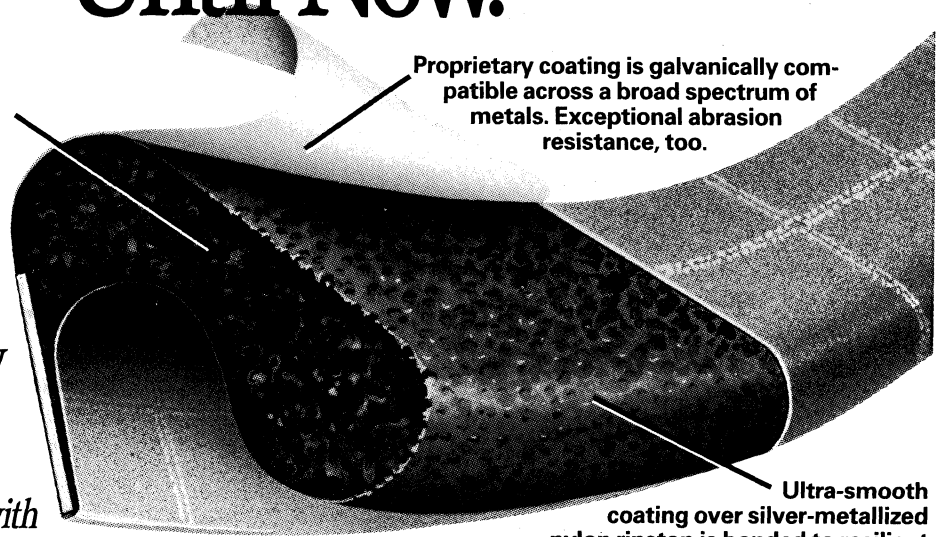
Excellence In Metal Forming

A Universally Compatible EMI Gasket Was Only Wishful Thinking. Until Now.



Introducing the new SCHLEGEL®-C^2 shielding gasket.

Galvanically compatible with virtually any metal or metallic coating, under almost any operating condition.

Specifying an EMI gasket is now simple. Because the patented SCHLEGEL–C^2 shielding gasket spans the spectrum of galvanic compatibility, from noble to active metals. No worry about corrosion, even under severe operating conditions. No loss of shielding efficiency.

The reason is an ultra-smooth, non-metallic coating over conductively clad urethane foam. The soft, spongy gasket fills big gaps, while the revolutionary coating conforms to even the smallest irregularities in metal surfaces. The result is a highly efficient shielding gasket and a superb environmental seal. For the design life of your equipment.

SCHLEGEL–C^2 gasketing is available in more than 20 profiles and in a variety of attachment methods. For a free sample or applications assistance, call or write now.

Sandwich construction at 700x magnification shows urethane foam at bottom of photo, clad with conductive silver-metallized ripstop (circular fiber ends). The entire assembly is encapsulated in a conductive, galvanically compatible coating.

At 250x magnification and after 100,000 wear cycles, the equivalent of being shipped three times cross-country, the outer coating of the gasket shows only minimal abrasion. Shielding efficiency is unaffected.

BUT IT CAN DESTROY YOUR BEST DESIGN

The next time your performance is measured by the success of your system's design, take a closer look at the critical link: will the shielded cable you select maintain signal integrity? At Belden, we're working to protect this critical link.

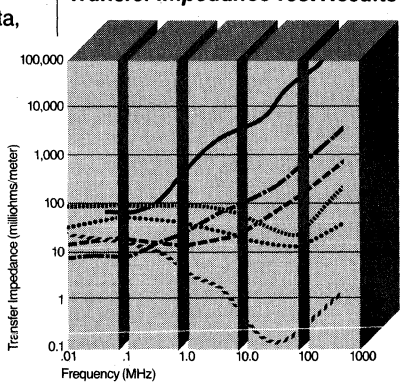
Shield Effectiveness

With the convergence of data, audio and video transmissions, one of the greatest challenges is to preserve the integrity of each signal. This evolution of technology, coupled with the need to comply with FCC regulations has created a growing demand for sophisticated cable shielding.

Belden responds to these demands with innovative shielding designed to meet the highest performance standards in the industry—including military TEMPEST requirements.

Belden helps you control interference and protect signal integrity with innovative shielded cable

Transfer Impedance Test Results



The lower the value of transfer impedance, the more effective the shielding.

Test Methods Protect Your System

To help you define interference problems, Belden's Technical Research Center evaluates the development, implementation and refinement of shields and shield effectiveness testing. Our Transfer Impedance Test is but one of many rigorous tests employed by Belden engineers. The procedures we use help you select the proper shielded cable that results in cost-effective system performance.

Effective Assistance

Belden has recently published a *Cable Shield Performance and Selection Guide*. It's free, and it helps you define your interference problem, acquaints you with current FCC regulations, and familiarizes you with the trade-offs associated with different shield designs and Belden's various test procedures for measuring shielding effectiveness. Shield performance results are detailed from each test to properly guide your cable selection.

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

BRIM CHV CORONA RESISTANT HIGH VOLTAGE TEFLON* CABLE

BRIM CHV eliminates the need for bulky, thick insulation, as used with silicone rubber high voltage cables, and provides high temperature resistance not available with polyethylene insulated high voltage cables, plus the added benefit of retarding and detering corona discharges. Even under severe stress, including mechanical strain, moisture, corona or chemical, or high temperature conditions, there is no cracking of the insulation. Cable construction meets and exceeds MIL-W-16878D.

OPERATING VOLTAGE: Voltage capabilities are based on the thickness of the jacket.

OPERATING TEMPERATURE: −90°C to +250°C

DESCRIPTION: Silver plated copper conductor, per QQ-W-343, special corona retarding insulation, TFE tape wrap insulation, & a color coded jacket overall.

STD. COLORS: Red, White, Black, Green, Blue, Yellow, Orange, Brown, Purple, Gray. Stripped colors are also available.

CONTROLLED IMPEDANCE CABLE — ELECTRONIC LACING CORDS & TAPES

BRIM BRIBBON™ 100 OHM CONTROLLED IMPEDANCE CABLE — UL 2651

DESCRIPTION: Flexible .010" UL VW-1 PVC insulation over 28 AWG 7/36 TC conductors, laid parallel. All conductors are colored Gray, with one edge Red for polarity identification. MEETS UL 2651.

BRIBBON™ cables are designed for fast, mass termination to all standard .050" IDC connectors. Double contour allows reverse plane terminations. Easy conductor separation for circuit routing, and uniform breakouts for harness production.

BRIBBON™ cables replace bulky round twisted paired cables, providing easy routing & greater space utilization within confined chassis. Precise spacing for controlled electrical characteristics — controlled crosstalk thru precisely controlled impedance and capacitance.

CONDUCTORS:
28 AWG (7/36)
Stranded Tinned Copper

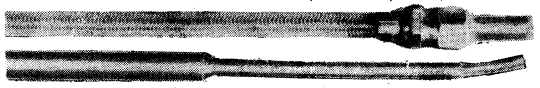
HEAT SHRINKABLE TUBINGS: BRIFLON™ TEFLON • TEFZEL – SILICONE RUBBER TUBING

SH200, SH250, SH254 & SHTF tubings have excellent resistance to weathering, chemicals (oils, fuels, solvents, acids, alkalis, fluids), & fungus, are non-corrosive, low water absorption (.01%), will not burn nor support combustion, have hi dielectric strength (850V/MIL dry), low dielectric constant, & a very low coefficient of friction. Hi mechanical strength yet flexible. (Low temp. flexibility −67°C). Their excellent electrical characteristics remain stable throughout their electrical range. Longitudinal change with full shrinkage: FEP −15%: TFE −20%. Color: Natural (FEP-transparent; TFE-translucent).



SH200 (FEP) MIL-I-23053/11

SH200: an extruded modified FEP (Fluorinated-Ethylene-Propylene) Teflon* tubing, with a continuous Oper. Temp. of +205°C (400°F). SH200 completely shrinks at 350°F (partial shrinkage possible at 200°F). Shrinkage ratio — 1.3:1. It melts at 525-563°F so it can be used to encapsulate. Now many sensitive components, parts, devices, etc. can be protected with Teflon*. Fills void between the hi temp. of TFE, and low temp. of PVC and polyolefin tubings.

SH254 4:1 SHRINKABLE TFE

SH254 tubing can recover to approximately ¼ of its expanded size when heated to its "gel" point (621°F-625°F). Because of its exceptional shrinkage capability, its recommended that the outside diameter of the object to be shrunk down upon should not be more than 50% of the expanded I.D. of the size of the tubing used. Many constructions conform to AMS 3584 and MIL-I-23053/12 class 5. SH254 is non-flammable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. * DuPont

SHTF SHRINKABLE TFE/FEP

SHTF is made with a combination of TFE and FEP Teflons*. The inner wall is made of FEP and the outer wall of TFE. When the tubing is heated, the TFE begins to shrink down tightly over the FEP. The FEP inner wall melts and flows-squeezes-into and around the item covered, creating a solid or near solid encapsulation. The fit is so tight that it is safe against most environmental hazards, involving pull or vibrations. It can be used as a strain relief, or moisture-proof covering for wires, connectors, terminals, splices, electronic devices, etc. SHTF is non-flamable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. Color: Natural (Transparent). OPERATING TEMPERATURE: −85°F to +450°F.

SHRINKABLE E-TFE TEFZEL* TUBING — MIL-I-23053/14

Designed for ruggedness. Excellent chemical resistance and high dielectric qualities which exist over a wide temperature range. Superior to Teflon* in its mechanical strength. Shrink Ratio-1.5:1. Shrinks quickly on application of only 300°F (150°C). Because of its quick shrinking ability at a relatively low temperature, many heat sensitive components and materials (solder joints, plastics, wood, metal) can now be easily protected. It is also heat sealable, chemically inert, self-extinguishing (non-flamable in air). Dielectric Strength: 400V/MIL. Uses: cable jacketing, wire markers, terminal covers, temperature probes, immersion tubing, heat exchanger coils, sight glasses, roll covers, chafe guards, component insulation. STD. COLOR: Translucent.

SPIRAL WRAP TUBINGS FOR HARNESSING

Easily twists on and off. Can be repeatedly flexed without cracking or breaking. Expandable. Holds wire, and cable bundles securely, and allows leadoffs or additions at any point. Bends around sharp corners, and protection against sharp edges. Available in 4 types of insulations: Polyethylene, Rulan (a flame retardent type of polyethylene), Nylon, Teflon. All are resistant to organic solvents, alkalis, and acids (nylon satisfactory except for strong acids). OSHA and UL approved for harnessing cables.

BLACK NYLON AND POLYETHYLENE SPIRAL WRAP FOR ULTRAVIOLET RAY PROTECTION IS AVAILABLE.

LOW & HI TEMP. PVC TUBING PER MIL-I-631 & MIL-I-7444 STOCKED.

SHRINK RATIO: 2:1 (50%) — OPERATING TEMPERATURE: −20°C to +105°C

SH110 meets or exceeds the performance requirements of MIL-I-23053/2B, Class 2 but for its dimensions — its heavier wall. SH110 is a Heavy Wall Shrinkable PVC tubing, yet its flexible, and will shrink at temperatures below 200°F (within one minute). Provides outstanding dielectric and mechanical protection without damage to enclosed or adjacent components, even around sharp bends. Longitudinal shrinkage: approximately 20%. SH110 is self-extinguishing, resistant to fungus, moisture, sunlight, and most oils, and chemicals. Dielectric Strength: 600V/MIL min,. ASTM-D922. Suitable as a heavy duty all-purpose shrinkable tubing that is less expensive, almost as flexible, and has a higher temperature ability than that of Shrinkable Neoprene tubing. Suggested Storage Temperature: Under 70°F for up to 10 months.

FOIL - Aluminum bonded to both sides of a polypropylene or polyester tape. When foil is used in conjunction with a braid shield, FOIL will be followed with a + and a letter/number combination.

BRAID - Strong, flexible wire braid is used to shield many of our cables. Braid designation is given as a percentage figure followed by a two letter code (i.e. 96% TC would be 96% coverage of a Tinned Copper braid).

- **ALS** - Aluminum Sheath
- **AL** - Aluminum braid
- **BC** - Bare Copper braid or foil
- **SC** - Silvered Copper braid
- **TC** - Tinned Copper braid
- **XX%** - the percentage coverage offered by the braid

This series is designed for maximum mechanical strength at stress or points of connection. It is strong, abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weather-proofs components, connectors, cables and irregular shaped objects. When exposed to heat 250°F the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. SH275 meets or exceeds UL STD 224, MIL-I-23053B/5 Class 1 (colors) and 2 (clear), and MIL-R-468464 (MI), TY 5, CL 1. SH290 meets or exceeds MIL-1-23053/6. SH275 is available with UL approval. AMS 3636B (colors), 3637A (clear). Flame retardant (except clear).

NEW! DAFLEX SHRINK/MELT IRRADIATED POLYOLEFIN TUBING LARGE SHRINK RATIO

Daburn's dual wall polyolefin heat shrinkable tubing is designed to provide a tight moisture proof encapsulating seal. It is suitable as end cap, strain relief, whip cord for ropes and may be used as a selective potting and/or molding compound over wires and cables. When 110°C is applied, the inner wall melts and flows, as the outer wall shrinks; forcing the melting wall to fill voids and interstices and to encapsulate what is covered. The result is a semi-rigid mass. **Daflex SM270 series** is ideal for covering splices, cable junctions and as a shield for coarse surfaces. SM270 is flame retardant. It resists oil, hydraulic fluids, acids and alkalis. It meets or exceeds MIL-I-23053/4, Class 3, AMS3634, is UL APPR. VW-1 for 105°C, 600V.

NEW! 4:1 SHRINKABLE POLYOLEFIN TUBING

DAFLEX SH277 shrinkable irradiated polyolefin tubing recovers to 25% of its supplied size when full recovery is permitted. Material will shrink with the application of 120°C (250°F); is rated for continuous operation from −55°C to 135°C and will withstand up to 200°C (392°F) for short durations. 500V/MIL. Minimum dielectric strength.

SH277 is flame retardant and meets or exceeds the specified properties of MIL-1-23053/5 Class 1 and 3. Its longitudinal shrinkage is a maximum of 10%. DAFLEX SH277 can be hot stamped.

Typical applications are where tubing must fit over a large object such as the repair or replacement of cable jacketing, with a connector in place.

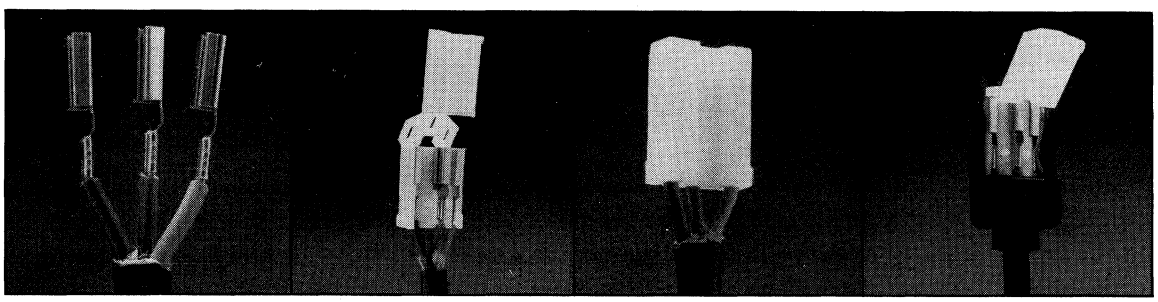
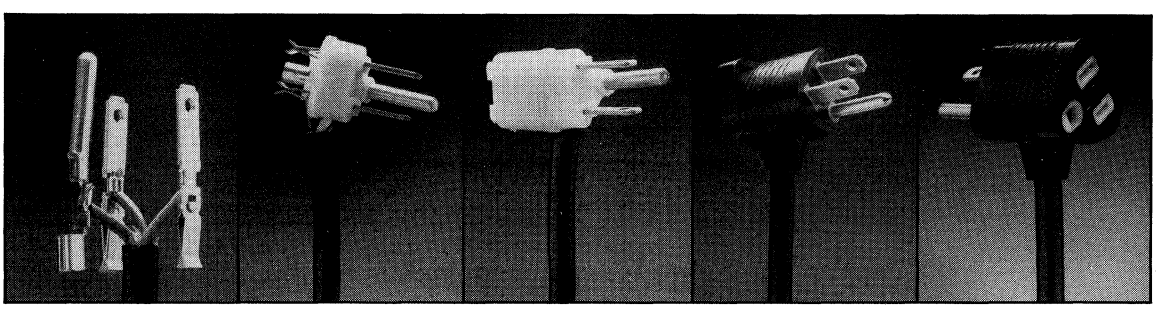
WE DESIGN CORDSETS TO YOUR SPECS—AND TO OUR HIGH STANDARDS.



Our unique electrical protection enclosure eliminates flashing and the hazard of stray copper strands resulting in maximum safety and reliability.



100% electrically tested for continuity load, dielectric strength and resistance.

UL tested and CSA certified. All General Cable cordsets are appropriately labeled.

Crimp integrity - "B" Crimp provides uniform copper connection for greater mechanical strength and improved electrical contact. Crimp on both wire and insulation provides high performance wire crimp plus strain relief.

Electrical protection barriers prevent the possibility of loose strands reaching molded surfaces.

Our engineering department is available to discuss your specific cable needs and custom-design to your specs.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $2.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

GSI CORPORATION

HIGH PERFORMANCE FLAT WOVEN CABLE

GSI Woven Cable is produced to order and shipped on spools in continous lengths, as straight or branched harnesses, or as elements of complex assemblies.

Weave Patterns and materials are engineered to provide attributes such as wide or close spacing between conductors, flexibility or rigidity, permanent bonding or fast and easy lead separation.

Conductor Types have virtually no limit. Wire may be MIL spec or UL listed of many formulations. Twisted pairs, triplets, coax and other constructions are readily handled. Flexible conductors of 10 AWG to 40 AWG are standard.

Color Coding options are many and varied. NEMA color sequence is a popular choice for wire, but other combinations are available for conductors and weave material.

Space and Weight are saved with woven cable. Weave elements such as Kevlar provide strength; and flat designs require less space than round cables.

Mixing of Components is a unique feature of woven cable. Conductors of different sizes or constructions can be placed side by side in the same cable.

Wire Preparation is made easy and fast without risk of damage to components. Wires are individually insulated. Color coding and placement of conductors makes identification nearly foolproof.

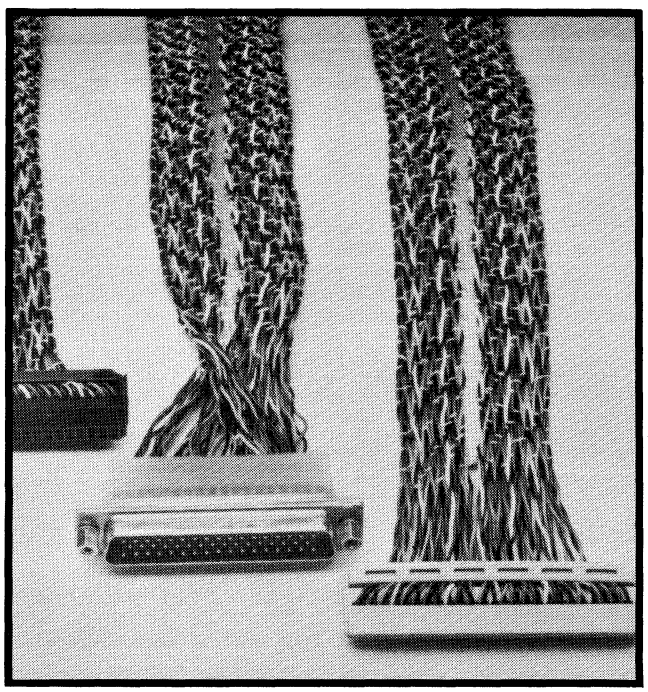
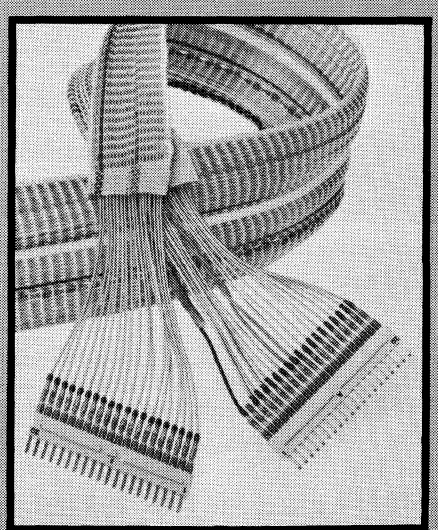
HIGH PERFORMANCE WOVEN CABLE SYSTEMS

GSI CORPORATION





Programmed Harnesses provide dimensional accuracy at low cost. These machine made assemblies look great, work perfectly, and save on installation time.

Cut or Fold Lines can be designed-in to allow for rapid separation of groups of wires and the folding and stacking of woven elements.

Multiple Layers may be utilized so that the cable assumes a space-efficient box shaped cross section.

UL Labeling is available for GSI wire and for GSI woven cable and harness assemblies.

Terminations are available in a wide range of industrial and military styles. Woven cable is easily adapted to mass termination systems.

Composite Construction combines diverse technologies. Flat woven cable may be combined with contrahelically twisted round cable and other construction methods to achieve optimum design and performance.

MIL-Spec procedures and processes guarantee satisfaction on military jobs. Inspection to MIL-I-45208A, high reliability soldering to MIL-S-45743E and calibration to MIL-STD-45662 are integral to GSI's operations.

HIGH PERFORMANCE INTERCONNECTION SYSTEMS

Complex Assemblies are produced from customer drawings by skilled operators. Assembly and test operations are performed in appropriate controlled environments.

Shields and Jackets may be braided onto both round and flat cable. RFI, EMI, EMP and Tempest requirements are met with multiple layers of dense shielding.

Wire Markers have been a GSI specialty for over 20 years. Products include both shrinkable and non-shrinkable tubing in a number of standard colors. Cable ties and marker plates are also permanently imprinted.

Color Banding is a superior process for marking fine wire for military aircraft and other high technology applications. Up to five colored bands make up to 100,000 discrete color codes available for white wire from 12 AWG to 30 AWG. GSI color banded wire is used in advanced U.S. military aircraft and submersibles.

Soldering is done by certified operators in designated clean facilities with controlled temperature, humidity and air pressure. Equipment includes resistance reflow soldering systems for mass terminations.

Testing and Certification are available for all GSI products. Hi-pot and electronic tests may be specified in addition to standard continuity and spark tests. Abrasion, pull, hardness and other mechanical tests are routinely performed.

System Integration is another option offered by GSI. Cable assemblies may be combined with termination devices, other hardware and cabinetry to form complete assemblies or major subassemblies. GSI's complementary skills and technologies ensure competitive price and delivery.

Technical Support is available for the asking. GSI's engineering staff has expert knowledge and can work quickly to solve problems. And, since GSI is not wedded to one technology, each problem is approached objectively.

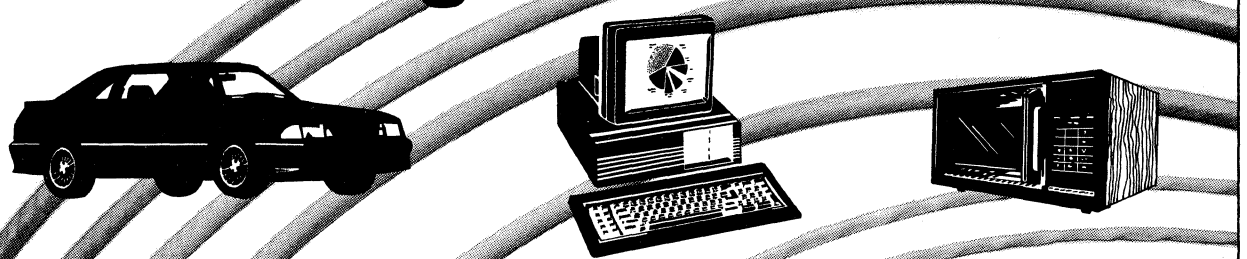
Judd Wire

WIRE TO WIRE... Superior Performance Through Irradiation



Engineered to Stringent Underwriters Laboratory and Canadian Standards Association Requirements.

- PCA Universal Hook-up Wire
- FLEXRAD 125®
- FLEXRAD HV

For over 13 years PCA Universal Hook-up Wire, manufactured by Judd Wire, has answered the need for less expensive wire insulations by combining high performance characteristics with economical prices.

PCA (polychloroalkene) is constructed with an exclusive irradiation cross-linked PVC that offers high heat and burn-through resistance, a wide continuous operating temperature range, from −55 °C to 105 °C, improved chemical and flame resistance properties, and superior processability.

High technology and careful engineering led to the development of FLEXRAD 125, an irradiation cross-linked polyethylene wire and cable for applications in the temperature range of −55 °C to 125 °C. Processed with tinned copper conductors, FLEXRAD 125 provides an ideal alternative to the problems of fluocarbon insulations.

Outstanding features are:

- Excellent operation at cold temperatures.
- Superior cut-through resistance.
- Easy strippability
- Long continuous lengths
- Maximum flexibility.

FLEXRAD HV is the high voltage lead wire of choice for electronics, appliances, test equipment, and instrumentation.

FLEXRAD HV has superior irradiation cross-linked polyethylene insulation, 5KV to 40KV applications, and is rated for use at 105 °C. In addition, FLEXRAD HV is a problem solver — its flexibility makes it easy to install in tight spaces, and, like all Judd irradiated products, it resists shrink back and melting even when in contact with a soldering iron.

Substantial savings in initial cost, space, and wire weight are usual when FLEXRAD HV is used.

FACILITIES/SERVICES

CUSTOM ENAMELING
In our custom enameling facilities we enamel most metals from .072″ to .0004″ round or square and rectangular sizes smaller than 14 AWG or 3500 sq. mil. cross-sectional area. Insulations are available in special colors, builds and bondable overcoats. All insulations meet NEMA MW 1000, 105–220 °C, single thru quadruple film builds. Up to 10 insulation colors are available to aid in conductor identification.

WIRE SHAPING
MWS produces a complete line of miniature square and rectangular wires in a variety of metals. Sizes smaller than 14 AWG sq. and rectangular shapes smaller than 3500 sq. miis. are produced bare as well as film insulated.

RIBBON ROLLING
MWS operates facilities for production of flat ribbon wire in a wide variety of metals. Thicknesses range from .0005″ with widths up to .125″. Ribbon wires are available bare, film insulated and plated.

DRAWING AND ANNEALING
Our drawing and annealing capabilities round out our custom manufacturing facilities. These capabilities allow us to fabricate most metals from .064″ through .0004″ diameter in the temper and quantity you require.

TESTING LABORATORY
Expanded test facility provides complete chemical, physical and electrical test data for applicable military, federal, commercial and customer standards. Metallurgical and I/R spectro analysis are also available. We can provide you with fast and accurate answers to your technical questions.

CUSTOM PACKAGING
MWS has designed custom molded, individual foam shipping containers for our 2½″, 3″, 5″ and 6″ plastic spools. These containers eliminate damage in shipping, and later prevent breakage in storage and production line handling.

WIRE TWISTING
MWS operates facilities for twisting 2 or more conductors 24 AWG and finer. Twisting tightness up to 33 twists per inch and to tolerances of ± 1%. Conductor materials include copper, silver, plated conductors and specialty alloys, in bare and insulated constructions.

WIRE SPOOLING
Spooling facilities handle every size wire from heavy square and rectangular to ultra-fine. This enables you to buy the quantity of wire you need on the spool size you want.

MICROSQUARE™
MAGNET WIRE

For specialty coil and motor windings.

While product miniaturization allows less space for components, MWS MICROSQUARE film coated magnet wire lets you design compact coils and small motors that deliver more power in less space.

MICROSQUARE means miniature square and rectangular copper and aluminum magnet wire. Custom produced in sizes *smaller* than 14 AWG or 3500 sq. mil. cross-sectional area, MICROSQUARE is available in a wide range of solderable and high-temperature insulations in a variety of colors, with or without bondable overcoats.

MICROSQUARE magnet wire was developed to provide improved winding uniformity and maximum use of space. When you're looking for options to meet the most demanding coil, small motor, or other special application requirements, without size limitations or quantity minimums, take a good look at MICROSQUARE magnet wire.

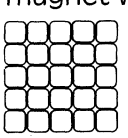

Illustration of cross-section of coil winding using MWS MICROSQUARE magnet wire. Note improved winding uniformity and maximum use of space.

MULTIFILAR
MAGNET WIRE

Parallel bonded for windings and leads.

When two or more magnet wires travel together, MULTIFILAR magnet wire is an excellent alternative.

This parallel bonded, color-coded magnet wire offers more consistent capacitance and impedance characteristics when compared to windings using two or more separate magnet wires.

And, it allows for increased layer winding speeds, as well as reduced labor and handling. Color-coding assists in conductor identification and helps eliminate termination errors.

MULTIFILAR magnet wire is custom produced to guarantee flat, parallel construction in an array of sizes, 16–52 AWG, with up to 20 conductors in some sizes.

Available constructions include round, flat or square conductors. Individual conductors meet NEMA MW 1000, JW 1177, temperature classes 105–220°C; single through quadruple film builds. Color-coded conductors are available in most insulations with up to 10 different colors in some sizes.

(NW1918SJ shown)

IN STOCK

MIL-SPEC U.L. LISTED — STYLE 2343 & 2344

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cable. Conductors are stranded tinned copper with ¼" wall of vinyl primary insulation for use up to 105°C per MIL-W-16878 Type C.* Insulated for 1000 volts working voltage. Color coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape serve over cable bundle. Shielded cables have a tinned copper braid overall, of 85-90% coverage per MIL-C-7078, and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C vinyl meeting MIL-I-631 Class F. All materials are self-extinguishing and fungus resistant. All cables are U. L. LISTED STYLE 2343; rated 80°C. (Higher temp. ratings apply to any non-U.L. service.) U.L. certification furnished only when requested.

Standard Putups: 100, 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

For applications in extreme environments, consult factory for alternative sheath materials.

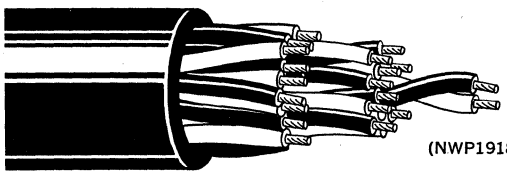
Heavy Duty Signal & Control Cables Twisted Pairs (NWP Series)



(NWP1918J shown)

IN STOCK MIL-SPEC

U.L. LISTED

Identical to National's NW-Series Cables except offered as twisted pairs.

National Wire & Cable Corporation manufactures a complete line of multiple pair control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105°C per MIL-W-16878D Type C. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per table below.

All pairs are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black vinyl plastic per MIL-I-631; or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene at added cost and only available for non-U.L. applications).

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8,000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance wire to wire for a pair ranges from 27. to 40. mmfd/ft. Capacitance from both wires tied together measured to all else in common ranges from 35. to 60. mmfd/ft. dependent on gauge and position. Overall shield has negligible effect on W-W capacitance.
Insulation Leakage Res.:	200. megohms / 1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms / 1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.

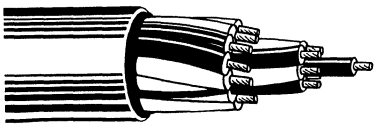
Miniature Signal & Control Cables Single Conductors (NQ Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQ1928J shown)

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010″ wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.
All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

MIL-SPEC & U.L. LISTED **STYLE 2464**

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006″ greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

MULTI-CONDUCTOR STOCK CABLED SINGLES

Conductor sizes 28, 26, 24, 22 are 7 strand. All others 19 strand.

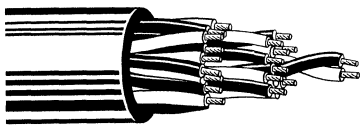
Miniature Signal & Control Cables Twisted Pairs (NQP Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQP1928J shown)

MIL-SPEC & U.L. LISTED **STYLE 2464**

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010" wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.

All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

** Jacket material is military rated for +105°C; meets MIL-I-631, Class F.

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006" greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

LOW VOLTAGE COMPUTER CABLE

THE D-200 SERIES CABLES ARE MULTIPLE-PAIR FLEXIBLE CABLES DESIGNED FOR TRANSMISSION OF DIGITAL PULSE SIGNALS BETWEEN A COMPUTER AND ITS PERIPHERAL EQUIPMENT.

DESIGN FEATURES OF THE D-200 SERIES DIGITAL DATA CABLE

Unlike conventional flexible cable construction, the primary features offered by the D-200 series data cable are the high and accurately controlled characteristic impedance of every pair, regardless of its position in the cable and special geometry chosen to reduce crosstalk.

ADVANTAGES

1. Less crosstalk and noise from mismatched loads, due to proper matching.
2. Uniform light loading on drivers allows direct I.C. drive, accurate prediction of current demands from power supply, and driver power dissipation.
3. Proper load match reduces re-flection and inversion noise where driver end is not matched to line. (Typical of TTL.)
4. Special geometry and pair construction provides exceptionally close capacitance balance between pair wires, reducing differential crosstalk.

USAGE

We recommend use of balanced drive and differential-input line receivers for lowest crosstalk and best pulse reproduction, utilizing the 110 ohm balanced impedance of the pairs. With such a system, TTL speeds have been used on D-200 cable at 1 mc data rates over 1000 ft.

Where the system is single-ended drive and receive, all pairs exhibit the 78 ohm impedance. Since these line receivers cannot discriminate between noise and the desired signal, crosstalk limits the cable distance over which transmission is reliable. Typical runs for DTL having 50 ns risetimes are 200 ft. Where risetimes can be slowed to longer than 100 ns, run lengths are practical to 500 ft. Without differential line reception, runs over 500 ft are not recommended for D-200 cable due to external noise aspects.

The D-210 series cable are recommended for high noise or long-run application. (Utilizing individual shields.)

Although use of balanced drive and differential line reception will avoid most noise problems, there are some installations where the expected external noise is unknown but assumed to be very great. Here, the use of data cables having individually-shielded pairs may be considered as conservative engineering practice. The assurance of a lower received noise may justify the increased size, cost and rise-time.

For these high noise-long run applications, Dynatronic Cable Engineering Corp has developed the D-210 series data cables. Electrical performance is essentially the same as the D-200 series cables, which use only an overall shield. △ An overall tinned-copper shield braid may be specified on either series by the suffix -RF on the part number. Standard D-200 shield is aluminum-mylar foil.

For runs of 1000-5000 ft. or where extra-fast output pulse risetime is required, we offer the D-220 series cable: a larger version of the D-200 series having improved transmission properties with sufficient mechanical strength for long pulls in conduit. Consult factory for technical data.

PULSE TRANSMISSION LOSS in D-series data cables causes a moderate amplitude loss, with definite rounding of the leading and trailing edges from 50% to 90% amplitude. The photos below (for a 1.25 megabit clock rate) show typical waveforms. The D-220 and D-222 series cables offer even lower losses than the D-200 or D-210 cables for long-run or fast-clocked applications.

CABLED SINGLES (NL SERIES)

NEC UL LISTED CL 2

SIGNAL & CONTROL TRAY CABLES

National Wire & Cable Corporation manufactures a complete line of DUAL-RATED multiconductor NEC TRAY CABLE Type CL2, for signal, instrumentation and control uses. Also UL rated for use as 300 Volt Appliance Wiring Material (AWM). These are available as cabled singles or pairs, with optional overall shield of aluminum-Mylar foil with drain wire.

Cabled conductors use stranded tinned copper wire with 0.010" wall of tough extruded poly-vinyl-chloride (PVC) insulation, rated for 300. Volt use under U.L. Style 2464.

All wires are color coded using 10 standard solid colors plus white with stripes. Cabled singles are color coded the same as our NQ and NX cable families per MIL-STD-681. (See table in Tech section.) Cabled pairs are color coded the same as our NQP and NXP cable families.

Conductors are helically cabled and laid for optimum flexibility, with a Mylar tape barrier wrap (or Mylar + Foil) applied between cabled wire bundle and outer jacket.

Shielded cables have an overall Aluminum-Mylar foil shielding tape helically wrapped over cable and a tinned uninsulated drain wire for shield connection. (Use FSJ part number suffix.) For optional composite tinned copper RFI braid(s) + foil shielding, consult factory.

Outer jacket is a special highly flexible abrasion-resistant black poly-vinyl-chloride (PVC) thermoplastic. DUAL-RATED jacket compound meets the requirements of both U.L. Style 2464 AWM and U.L. 13 Type CL2 TRAY CABLE. Jacket is surface printed with both UL 2464 AWM and U.L. 13 Type CL2 TRAY CABLE identifiers.

Finished cables comply with applicable U.L. tests for N.E.C. Type CL2 TRAY CABLE Vertical Tray Flame Spread. All materials are flame-spread retardant and fungus resistant. The products are DUAL-RATED for AWM use as U.L. Style 2464 300 Volt, 80°C, OR for U.L. 13 Type CL2 TRAY CABLE 105°C use.

Standard putups: 500 ft. and 1000 ft. No-deposit reels. For shorter quantities or specific lengths consult factory.

International & North American Cords & Cordsets

Designing for Export—Important Considerations

There are three important technical hurdles facing the designer of equipment that will be exported:

- the product must be easily connected to foreign mains power outlets or wall sockets.
- the product must work at foreign mains voltages and frequencies which range from 100-250VAC at 50 or 60Hz. European voltages are typically 220 at 50 Hz. (See our power inlet modules with integral voltage selectors in Section 2100.)
- the product must conform to foreign product safety standards as enforced by appropriate national standards and test agencies.

Note that products being shipped to Europe—and almost everywhere outside of North America—must utilize Harmonized cordage manufactured to CENELEC standards HD-21 (for PVC jacketed cordage) or HD-22 (rubber jacketed). Harmonized cordage differs from North American AWG cordage in several ways. The main differences are:

- Primary insulation color coding on Harmonized cordage is brown–line, blue–neutral, yellow-green–ground (North American color coding is black–line; white–neutral; green–ground).
- Harmonized wire sizes are expressed in metric units (North American wire sizes are expressed in AWG). Some of the common power cordage wire sizes are noted below:

AWG	Closest Metric Equiv.	Max. Current
18 AWG	0.75mm²	6A
16 AWG	1.00mm²	10A
14 AWG	1.50mm²	16A

Specifying International and North American Power Connections (see options at right)

1. **Detachable cordsets** based on IEC 320 connector system. Benefit: Flexibility. The IEC 320 power inlet (installed on product) and outlet (on cordset) allows the manufacturer to attach a cordset with the correct international or North American wall plug just before shipment. Current ratings are limited to 6 or 10 amps by European agencies. IEC 320 standard sheets C19 & C20 permit detachable power connections rated at 16 amps—PCC offers several standard high-power cordsets—see the pages which follow for more information.

2. **IEC 320 cord with Harmonized or SJT cordage and no plug:** Ready for attachment of correct overseas or NEMA plug—when small export volume does not justify stocking different cordsets.

3. **Power Supply Cords:** Permanently installed cords are usually specified when your equipment requires more than 10A. For applications rated at 10-16 amps, 1.5mm² (cp. 14AWG) conductors are specified.

4. **Made-to-Order Cord & Cordset Assemblies:** Specify a made-to-order assembly when standard model is not available or when special end preparations are required.

5. **Cordage:** When neither a molded power supply cord nor cordset is suitable, international or North American cordage with appropriately sized conductors may be the best alternative. (See last page of Panel Components' ads in this section for cordage.)

European High Power Connections

The single-phase cords and cordsets below use standard international cords with detachable IEC 320 connectors and/or plugs & inlets based on IEC 309. The 3-phase cords and cordsets below utilize only IEC 309 connectors. IEC 309 is an international standard which defines a power connection system for use at high voltages—from 16-125A at 50Hz in Europe. Detachable power connection systems are particularly useful where a piece of equipment must be moved from workstation to workstation. IEC 309 connectors are designed to eliminate mismating of connectors of different amperages and voltage ratings through unique key/keyway, pin patterns and connector sizes. Mating inlet and outlet connectors are also available from Panel Components Corporation.

International & North American Cordage

Products being shipped to Europe—and almost everywhere outside of North America—must utilize Harmonized cordage manufactured to CENELEC standard HD-21 (for PVC jacketed cordage) or HD-22 (rubber jacketed). Harmonized cordage differs from North American AWG cordage in several ways:

- Primary insulation color coding: Harmonized cordage: brown–line, blue–neutral, yellow-green–ground (North American: black–line, white–neutral, green–ground).
- Harmonized wire sizes are expressed in metric units (North American wire sizes are expressed in AWG). Some of the common power cordage wire sizes are noted below.

AWG	Closest Metric Equivalent	Max. Current
18 AWG	0.75mm²	6A
16 AWG	1.0mm²	10A
14 AWG	1.50mm²	16A

Most cordage models below are available from stock.

Microminiature Connector/Cable Solutions.

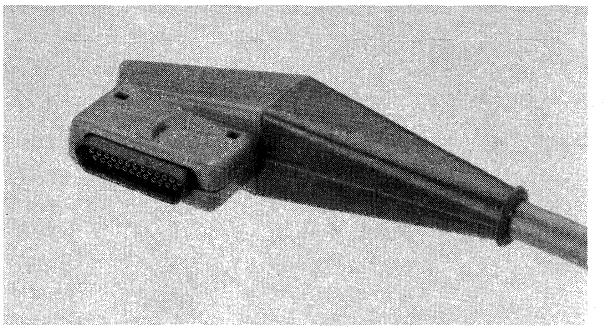
WE UNDERSTAND MICRO

As electronic components and equipment get smaller, problems grow. By continually developing and testing new materials, configurations, manufacturing techniques, and termination processes, P.I. has been able to create smaller, more compact, lighter weight, highly reliable interconnect systems.

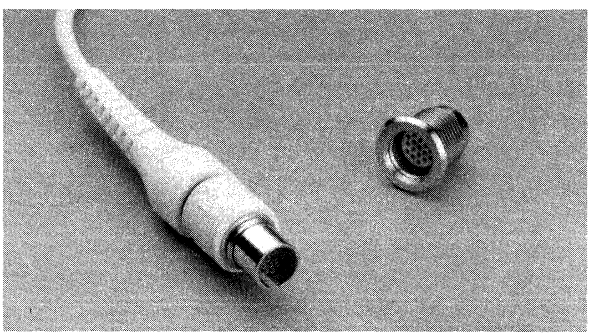
Our entire operation, from product development to final inspection, is designed to produce the smallest systems in the industry without sacrificing reliability or electrical integrity.

OUR SPECIALTIES

- Connectors/cable assemblies for data processing, military/aerospace, medical, geophysical and test and measurement applications
- Transmission line assemblies for high-speed electronic equipment
- Problem-solving, application-specific, cost-effective, completely tested interconnect systems.

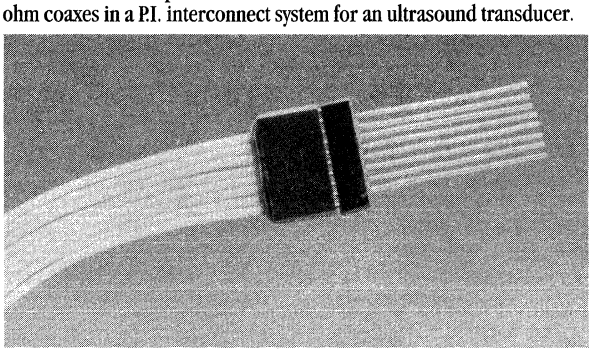


25 position Micro-D with crimped contacts for durability and cost savings incorporates injection molded backshell and strain relief on a multi conductor (32 AWG) twisted pair cable (time matched to 100 picoseconds) for a logic analyzer.



19 position, microminiature circular connector with a molded strain relief terminates a 16 conductor cable (8 twisted pair of 38 AWG) for a robotic interconnect system.

Microminiature strip connector terminates a cable of 66/38 AWG 50 ohm coaxes in a P.I. interconnect system for an ultrasound transducer.



Custom connectors in P.I. interconnect systems can be designed using nanominiature contacts (size 30) where greater weight and space savings are required in data processing, military and medical applications.

The Advantages of Complete Microminiature Interconnect Systems.

THE SYSTEM

At Precision Interconnect, we not only design and manufacture application-specific microminiature cables and connectors, we terminate wires to connectors and add important components such as flex/strain reliefs when necessary. This way, by considering the interrelationship of all the critical components involved, our customers get a better designed and more reliable interconnect system.

MICRO CONNECTORS

Precision Interconnect's P.I. Micro Group designs interconnect systems using both existing microminiature and nanominiature connectors and custom designed, state-of-the-art connectors for specific applications. We specialize in connectors involving high contact density (as many as 1,600 contacts per square inch) with no degradation in reliability. The connectors we design and manufacture are critical components on interconnect systems for leading edge electronic companies around the world.

MICRO CABLES

Precision Interconnect pioneered the technology to produce microminiature, densely packed cables that can withstand the stresses of flexing, routing and torquing while maintaining precise electrical characteristics with extremely tight tolerances. We regularly manufacture cables with conductors as small as 42 AWG, and extrude insulations as thin as .002", making the smallest precision coaxes available.

MICRO TERMINATIONS

Precision Interconnect creates interconnect systems by terminating conductors to selected connectors and packaging them into cable assemblies. Our semi-automatic crimping machines produce reliable, cost-effective terminations. For special applications requiring the ultimate in miniaturization, wires can be soldered or bonded to substrates with .002" traces, .004" centers.

P.I.'s interconnect systems can consist of multiconductor round or flat cables, insulated wire harnesses, flex circuitry, substrates or custom chassis.

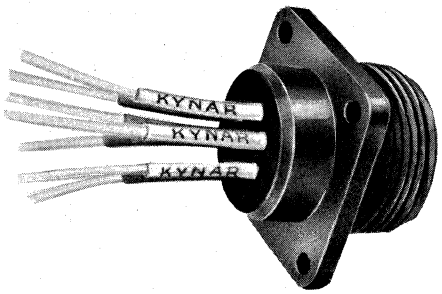
WEICO TUBING, SHRINKABLE

KYNAR* TUBING



WEICO'S Kynar is an irradiated, thin-wall, heat-shrinkable tubing offering a high degree of mechanical strength and high-temperature resistance. Kynar is fabricated from polyvinylidene fluoride, hence, their outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. Kynar is inherently flame-retardant and semi-rigid. It is highly resistant to most industrial fuels, chemicals and solvents.

Kynar tubings are recommended for shrink-fit protection and strain relief of wires, solder joints, terminals and connections. Suggested applications include automotive wiring, jackets, fuse coverings and military wire markers. Because the tubing is transparent, it affords see-thru inspection and identification when used as a jacketing for components such as resistors and capacitors. Kynar tubings are readily marked by hot-stamp and print-wheel equipment.

Kynar tubings are rated for continuous operation from —55°C (—67°F) to +175°C (+347°F). The tubings will withstand higher operating temperatures for short time intervals.

Minimum shrink temperature for Kynar tubings is +175°C (+347°F).

Kynar tubings meet the requirements of MIL-I-23053/8, AMS 3632, and are U.L. recognized for 600 volts @ 150°C; U.L. VW-1 rated.

TUBING, SHRINKABLE

NEOPRENE TUBING

NEOPRENE very flexible, self-extinguishing, modified polychloroprene tubings combining a high degree of mechanical toughness and oil-resistance with 121°C continuous operating temperature.

WEICO'S Neoprene heat-shrinkable tubings are recommended for applications requiring a tough, highly flexible covering. Neoprene tubings are thick-walled, and provide superior cut-through and abrasion resistance. The tubings are unaffected by common fluids and solvents. Resistance to oils is excellent.

Neoprene tubings maintain flexibility at low temperatures. The tubings are particularly useful for the fabrication and repair of flexible harnesses and wire bundles and for covering of hydraulic couplings. The superior mechanical properties of Neoprene tubings make them ideal choices for the jacketing of cable harnesses and custom-made cables that must operate in severe environmental conditions.

Neoprene tubings are rated for continuous operation from —70°C (—94°F) to +121°C (+250°F). The tubings will withstand higher operating temperatures for short time intervals.

Minimum shrinkage temperature for neoprene tubings is +135°C (+275°F)

Neoprene tubings can be readily marked by hot-stamp and print-wheel methods.

Neoprene tubings are self-extinguishing and meet the requirements of MIL-I-23053/1 Class 1 & 2; MIL-R-46846, Type 1, Class 1 and AMS 3623.

IRRADIATED POLYOLEFIN MULTIPLE WALL, INNER WALL MELTS

WEICO'S SMW Tubings are rated for continuous operation at temperatures from —55° to+ 110°C and will withstand higher operating temperatures for brief time intervals.

WEICO'S SMW Tubings meet the requirements of AMS 3634 and MIL-I-23053/4, Class 1.

WEICO'S SMW is a semi-rigid, 110°C heat-shrinkable polyolefin tubing that is co-extruded and selectively cross-linked to provide an integral, meltable inner wall.

On the application of heat in excess of 135°C WEICO'S SMW Tubing automatically shrinks and closely conforms to the contours of the underlying substrate. The inner meltable wall of the tubing is simultaneously softened and forced by the shrink action into intimate contact with all underlying surfaces, interstices and small voids. Upon cooling, the installed SMW Tubing represents a tough protective and insulating barrier, highly resistant to penetration by moisture and the attack of chemicals and solvents.

NOMOGRAPH VOLTAGE DROP

NOMOGRAPH OF VOLTAGE DROP ACROSS LOAD SUPPLY LEADS (as a function of wire size and load current)

THIS NOMOGRAPH CAN BE USED TO FIND:

Maximum current carrying capacity recommended for any standard wire size.*

1) With a straight edge, connect from the wire size on Scale 2 to the point "A" on Scale 3.
2) Read I_{max} on Scale 1.

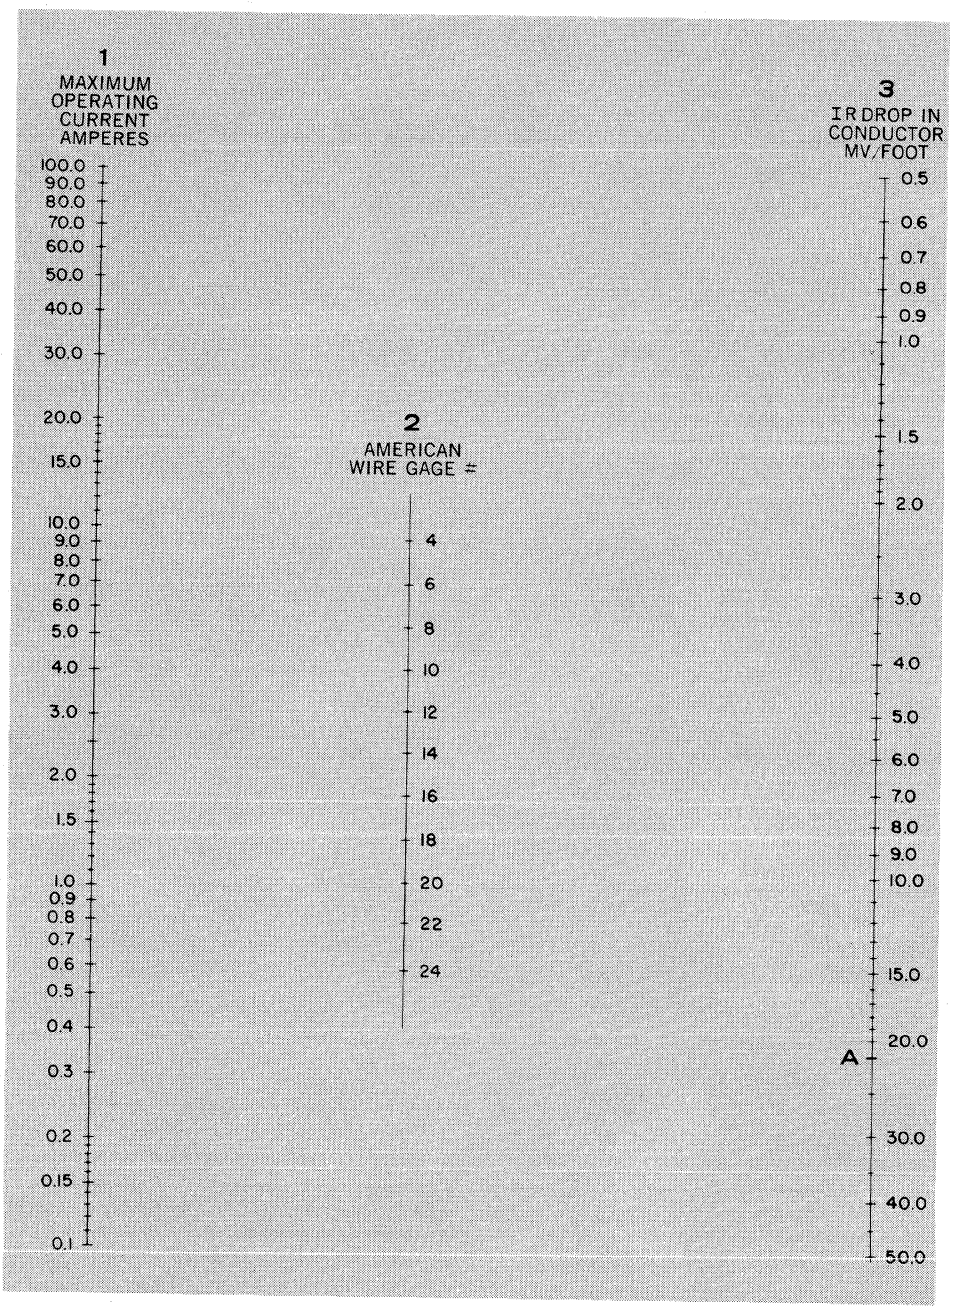
Voltage drop in millivolts per foot for known wire size and operating current.

1) With a straight edge, connect the known current on Scale 1 and the wire size on Scale 2.
2) Read voltage drop on Scale 3.

Wire size required for known operating current and known maximum tolerable voltage drop across supply leads.

1) Determine maximum tolerable drop in millivolts **per foot** of lead (sum of positive and negative leads).
2) Connect the value on Scale 3 (as determined in step 1) to the known current on Scale 1.
3) Read wire size on Scale 2.

* *Based on an arbitrary minimum 500 circular mils per ampere. High-temperature class insulation will safely allow higher currents.*



NOTE: A voltage stabilized Power Supply controls the voltage across its output terminals. Hence, the wire conductors used to connect the load must be considered as part of the load. At high load currents, the voltage drop across the supply leads may appreciably degrade stablization at the load. Kepco models equipped with the *remote error sensing* feature can automatically compensate for voltage drops of up to 500 mV across each load supply lead.
